CONCEPTUAL FRAMEWORK FOR INTERACTIVE CARTOGRAPHIC STORYTELLING

NOÉ ABRAHAM LANDAVERDE CORTPES
Enschede, The Netherlands, February 2018

Thesis submitted to the Faculty of Geo-Information Science and Earth Observation of the University of Twente in partial fulfilment of the requirements for the degree of Master of Science in Geo-Information Science and Earth Observation.
Specialization: Geoinformatics

SUPERVISORS:
prof. dr. Menno-Jan Kraak
dr. Corné van Elzakker

ADVISOR:
dr. Robert E. Roth, University of Wisconsin-Madison

THESIS ASSESSMENT BOARD:
dr. R. Zurita Milla
dr. ir. R.J.A. van Lammeren; Wageningen University & Research, Laboratory of Geoinformation Science and Remote Sensing

DISCLAIMER

This document describes work undertaken as part of a programme of study at the Faculty of Geo-Information Science and Earth Observation of the University of Twente. All views and opinions expressed therein remain the sole responsibility of the author, and do not necessarily represent those of the Faculty.

LIST OF FIGURES

Figure 1-1. The data journalism process. The value for the public increases when facts and discoveries are structures as stories. Adapted from European Journalism Centre [EJC] (2010).

Figure 1-2. Landing pages of two stories.

Figure 1-3. Methodology flowchart. Colored brackets group the processes taken to answer the successive sets of research questions in section 1.4. Block letters represent the research subobjectives.

Figure 3-1. a) The cartographic cube representing the map use space b) An adapted version of the cube depicting the 4 different goals of map use: exploration, analysis, synthesis and presentation. Note the two-dimensional axes in b) have been swapped, and the interaction axis is inverted. Extracted from MacEachren and Kraak (2011).

Figure 3-2. a) Stefaner's (n.d.) map of wind speed predictions. The map allows free exploration, similar to a Geovisual Analytics environment. **b)** Thompson and Lu's (2015) map depicting the number of witness deaths since 2004. Users also find themselves in the map, yet it guides the exploration of background information through scrolling and a timeline which locates the victim in time.

Figure 3-3. The necessary components of a narrative. Extracted from Chatman (1978).

Figure 3-4. Diagram of inherent relationships between story and discourse.

Figure 3-5. Mennis, Peuquet and Qian's (2000) pyramid framework for geographic representations.

Figure 3-6. Two maps showing two different geographic phenomena at different scales and different data representations..

Figure 3-7. The elements of a story, exemplified with the 5W questions. The “why” in the story and its main message are shaped by the interaction of all the components at the lowest hierarchical level. Modified from Chatman (1978).

Figure 3-8. The elements of narrative discourse. Extracted from Chatman (1978).

Figure 3-9. Elements of map discourse. Adapted from Chatman (1978).

Figure 3-10. The Segel and Heer's (2010) seven genres of narrative visualization (left).

Figure 3-11. Content Schemas. Images B-D extracted from Segel and Heer (2010). Image A created by the author. Image E retrieved from Schwabish (2017).

Figure 3-12. The three-act narrative structure plot. On the left, diagram after Young (2012). On the right: Herber, Schiffman, and Anavankot's (2011) linear variant.

Figure 3-13. Freytag's dramatic pyramid (left) and Laurel's contemporary version of the same pyramid (right). Adapted from Tensen (2014).

Figure 3-14. The three classical narrative procedures and their course of interest. (IE) is the generating event and (O) is the outcome.

Figure 3-15. Cohn's (2013) narrative categories. Images and table adapted from Cohn (2013).

Figure 3-16. Hierarchical diagram comprising the components of a Story Map. Based on Chatman (1978).

Figure 4-1. High-level categories and taxonomies storytelling and narrative techniques derived from literature in the visualization and cartography domains.

Figure 4-2. Maps of concepts that do not belong to any category or taxonomy.

Figure 5-1. Concept map indicating how terminology will be addressed in this chapter

- Figure 5-2.** Concept map of the first subcategory of Visual Narrative Tactics.
- Figure 5-3.** Techniques in the Navigation Feedback and Transition Guidance subcategory.
- Figure 5-4.** Concept map for the Visual Narrative Tactics subcategory named: Communication of Narrative and Information.
- Figure 5-5.** On the left, an example of cartographic ribbons extracted from Pearce and Hermann's (2010) map of Champlain's travels. On the right (top), an establishing shot giving a very brief introduction to a visualization on the evolution of music taste (Polygraph, 2016). Below, the animation of a bear in an empty background is played while content is loaded in "A Bear's Eye View Of Yellowstone" (Hello Monday et al., 2016).
- Figure 5-6.** Concept map of techniques for emphasis.
- Figure 5-7.** Spatio-temporal change patterns (STCPs) proposed by Ping, Xinming, and Shengxiao (2008). Figure adapted from Tensen (2014).
- Figure 5-8.** Concept map for the Interaction subcategory of Visual Narrative Tactics.
- Figure 5-9.** Information access rhetoric concept map.
- Figure 5-10.** Concept map containing the mapping rhetoric techniques.
- Figure 5-11.** Concept map showing the types and techniques in the Linguistic Rhetoric category.
- Figure 5-12.** Concept map of the Provenance rhetoric category.
- Figure 6-1.** Unsorted histogram of the distribution of maps across year of creation.
- Figure 6-2.** Sorted histogram showing the distribution of maps across producer type.
- Figure 6-3.** Proportion of the sample with different types of explicit temporal symbolization.
- Figure 6-4.** Distribution of maps across the different plot structures proposed by Phillips (2012).
- Figure 6-5.** Frequency of story themes per producer type. Themes extracted from (Vujaković, 2014).
- Figure 6-6.**
- Figure 6-7.** Comparison between the observed roles of visualization (left) against the ones of cartography (right).
- Figure 6-8.** From top to bottom: Scrolling triggers the overlay operator in Zeit Online's "A Nation Divided" (Zeit Online, 2014). Below, scrolling also acts as an interactive interface for the Zoom operator in Flagg, Craig, & Bruno's (2014) "California is Getting Fracked".
- Figure 6-9.** "Britain's Royal Navy in the First World War" (Brohan, 2012). The visual platform is maintained as the animation runs.
- Figure 6-10.** Symbolized binary tables depicting the existence of distinct types of navigation input across the map sample.
- Figure 6-11.** On the left, a Static News Map advances its content using section buttons only (populate, 2015). A play button starts a fully animated map depicting people movement across the globe in Elkanodata & Ticketbis (2015).
- Figure 6-12.** Navigation buttons, scrolling and a direct form of navigation have been incorporated into a single cartographic interface in (Chicago Metropolitan Agency for Planning [CMAP], 2014).
- Figure 6-13.** Implicit forms of controlling and indicating navigation. Obtained and adapted from Smart (2012) (left), and Andrews, Watkins, and Ward (2015).

Figure 6-14. A navigation indicator serving multiple functions, implemented in “Travel the path of the solar Eclipse” (Karklis et al., 2017)

Figure 6-15. A flowmap with an interactive timeline which pauses when the map is no longer inside the viewport of the browser. Animation immediately resumes when the map is again visible. Extracted from Misra and Lucify (2015)

Figure 6-16. Distribution of levels of control across storytelling genre.

Figure 6-17. Spatial continuity is preserved in a) Kohler et al. (2015), and b) Gillis et al. (2017) by a) smoothly changing the position of the viewpoint and following the 180° degree rule, and b) spanning the whole map area vertically along the interface (more than 6000 pixels in the y axis).

Figure 6-18. Trajectories are highlighted as the user generates input in Northwestern University KnightLab [NUK] (2014), and Bebber (2015).

Figure 6-19. On top: objects are linked by color and as text hyperlinks in “Election 2015: Where to vote tactically to get the prime minister you want” (Nardelli & Gutiérrez, 2015). Bottom: linking through symbol in “1812” (Nedkova et al., 2017).

Figure 6-20. Different approaches to splitting control. On the left, an interactive map is placed at the beginning of the narrative in Quoctrung and White (2016). On the right, narration begins after other forms of user input.

Figure 6-21. An example of snapshots generated via the save and annotate operators in a cartographic interface.

Figure 6-22. On the left map, substories are shown just in plain text. On the right a substory is depicted with media.

Figure 6-23. Destroyed and repaired roads are symbolized while showing an aerial picture of a message left by affected locals in Fischer (2017).

Figure 6-24.

Figure 6-25. A divergent color scheme continually shows lower values in red color, then inverts the color scheme to show the same type of difference. Extracted from populate (2015).

Figure 6-26. Comparison between a Static Map of the 2017 Total Eclipse (National Aeronautics and Space Administration, 2017) on the left, and a Longform Infographic depicting the same phenomenon dynamically (Karklis et al., 2017) on the right.

Figure 6-27. Distance encodes the disparity between racial make-up between neighboring tracts. Extracted from Vallandingham (2011).

Figure 6-28. “A World of Belonging on Airbnb”.

Figure 6-29. a) Authors narrate their own experiences in “Five Days in London” (Webadvantage, 2017), b) No documentation is provided in Nardelli and Gutiérrez (2015).

Figure 6-30. Fischer's (2017) “2013 Colorado Flood Recovery: Four Years of Progress”. A genesis plot was identified by the end of the narrative.

Figure 6-31. Integrated conceptualization of the Story Map. Numbering after concepts refer to section numbers.

LIST OF TABLES

Table 3-1. Map-based visual storytelling genres. Reproduced from Song (2017).

Table 3-2. Description of the content and purpose of each act, according to Song (2017).

Table 3-3. The eight basic plots in the earth sciences. Adapted from Phillips (2012).

Table 3-4. Definitions for the concepts: Narrative, Story, Discourse, Story Map.

Table 4-1. Summary of the concepts extracted from the visualization subdisciplines.

Table 4-2. Summary of the most relevant concepts extracted from storytelling and narratives in cartography. Numbers between parentheses indicate further low-level techniques within multi-level hierarchies.

Table 4-3. Summary of the narrative/storytelling techniques integrated and categorized within the first major category: visual narrative tactics.

Table 4-4. Summary of the narrative/storytelling techniques integrated and categorized within the second major category: rhetoric devices.

Table 4-5. Outline of the supplementary code sets for collecting further cartographic information during the Quantitative Content Analysis.

Table 5-1. Enabling and Work operators in the Operators subcategory of techniques for interaction.

Table 5-2. Techniques in the mapping category of rhetoric devices. Definitions were adapted to suit the context of Story Maps.

Table 5-3. Techniques and definitions in the individualization subcategory of Linguistic Rhetoric.

Table 5-4. Techniques for anchoring, the main and only subcategory of procedural rhetoric.

Table 6-1. Cross tabulation between Projection Types and Orientation.

Table 6-2. Frequencies of map types classified according to the Muehlenhaus' (2012) taxonomy of rhetoric styles.

Table 6-3. Frequency table of content schemas found in genres. Empty cells indicate no map with both characteristics was found.

Table 6-4. Distribution of genres across levels of control split

1. INTRODUCTION

1.1. Motivation and problem statement

1.2. The Potential Relationship Between Data-Stories and Cartography

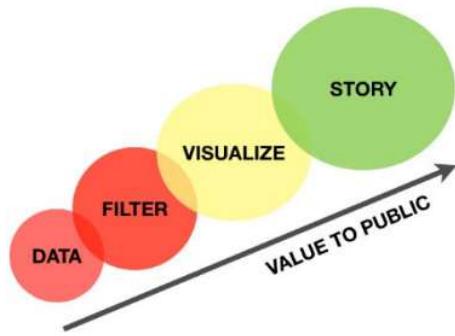

Figure 1-1. The data journalism process. The value for the public increases when facts and discoveries are structures as stories. Adapted from European Journalism Centre [EJC] (2010).

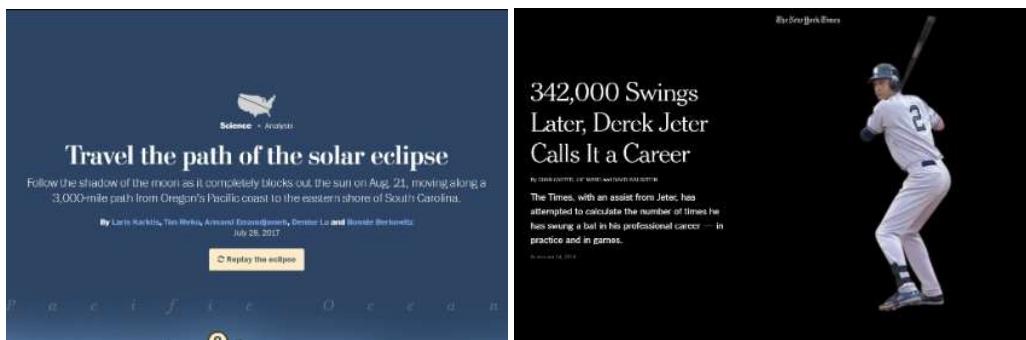

Figure 1-2. Landing pages of two stories.

A Washington's Post map showing the path followed by the solar eclipse of August 2017 (left) (Andrews, Watkins, & Ward, 2015). On the right, a visualization explaining the number of swings a baseball player has made along his career (Carter, Ward, & Waldstein, 2014)

1.3. Innovation aimed at

1.4. Research Questions and Objectives

1.5. Structure of this thesis

1.6. Methodology Outline

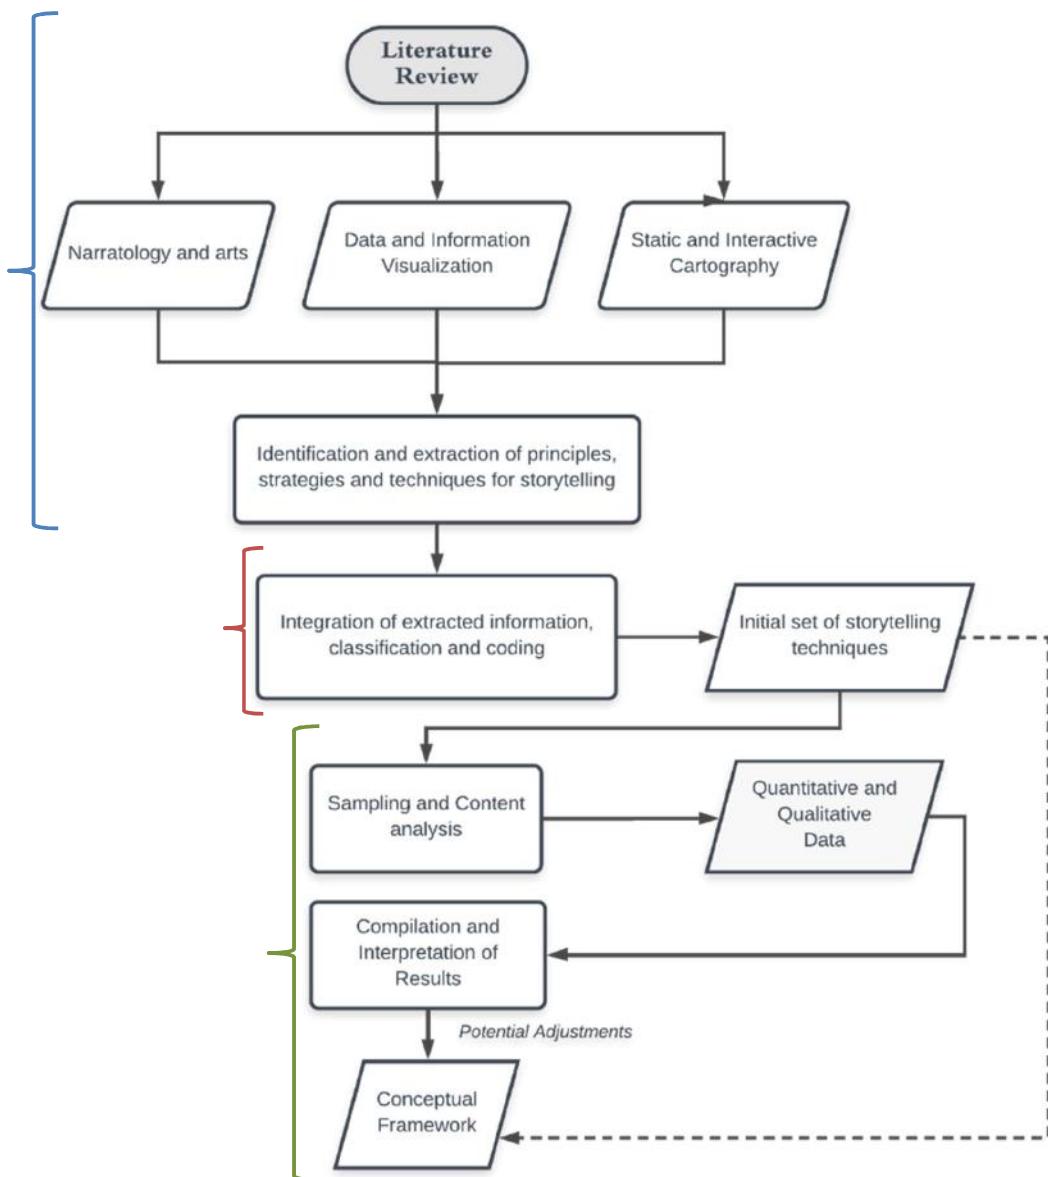

Figure 1-3. Methodology flowchart. Colored brackets group the processes taken to answer the successive sets of research questions in section 1.4. Block letters represent the research subobjectives.

2. LITERATURE REVIEW

2.1. Storytelling in non-digital cartography

2.2. Storytelling in digital cartography

2.3. Storytelling in visualization

2.4. Visual aids for storytelling in visualization

2.5. Storytelling in educational, analytical and collaborative environments

2.6. Other perspectives in cartographic storytelling

3. THE STORY MAP

3.1. Maps and stories: An introduction to the Story Map

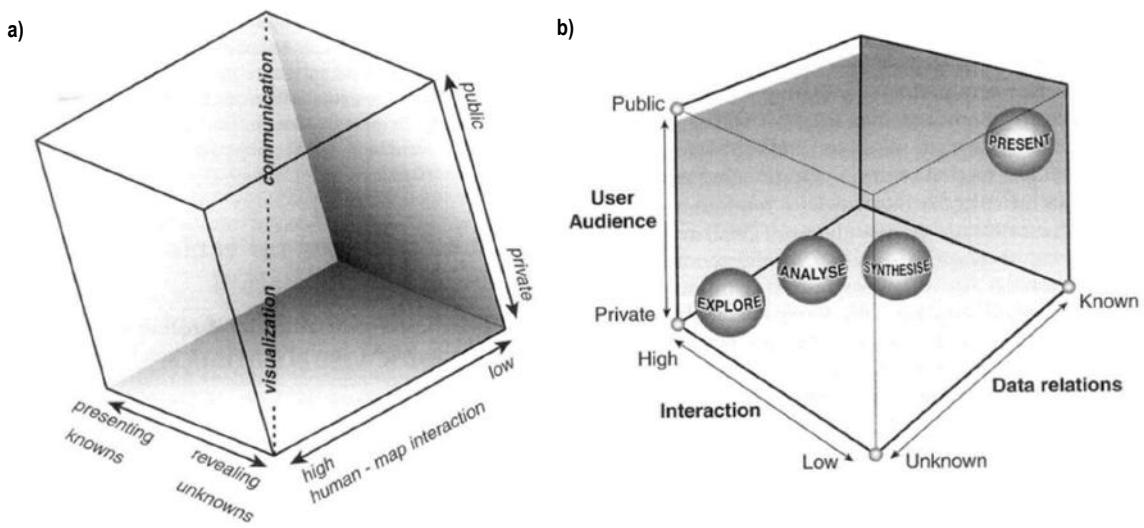

Figure 3-1. a) The cartographic cube representing the map use space b) An adapted version of the cube depicting the 4 different goals of map use: exploration, analysis, synthesis and presentation. Note the two-dimensional axes in b) have been swapped, and the interaction axis is inverted. Extracted from MacEachren and Kraak (2011).

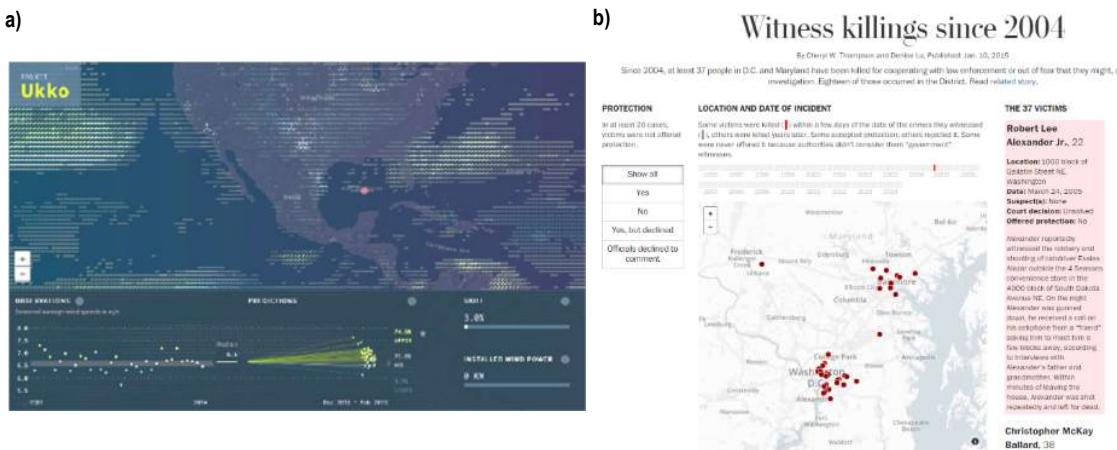

Figure 3-2. a) Stefener's (n.d.) map of wind speed predictions. The map allows free exploration, similar to a Geovisual Analytics environment. **b)** Thompson and Lu's (2015) map depicting the number of witness deaths since 2004. Users also find themselves in the map, yet it guides the exploration of background information through scrolling and a timeline which locates the victim in time.

3.2. Story and Narrative

-
-

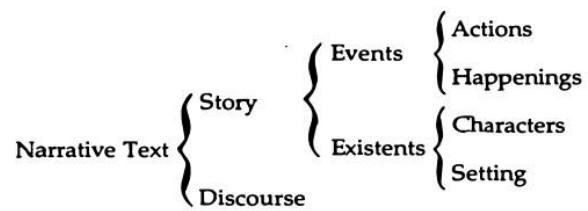

Figure 3-3. The necessary components of a narrative. Extracted from Chatman (1978).

-
-
-

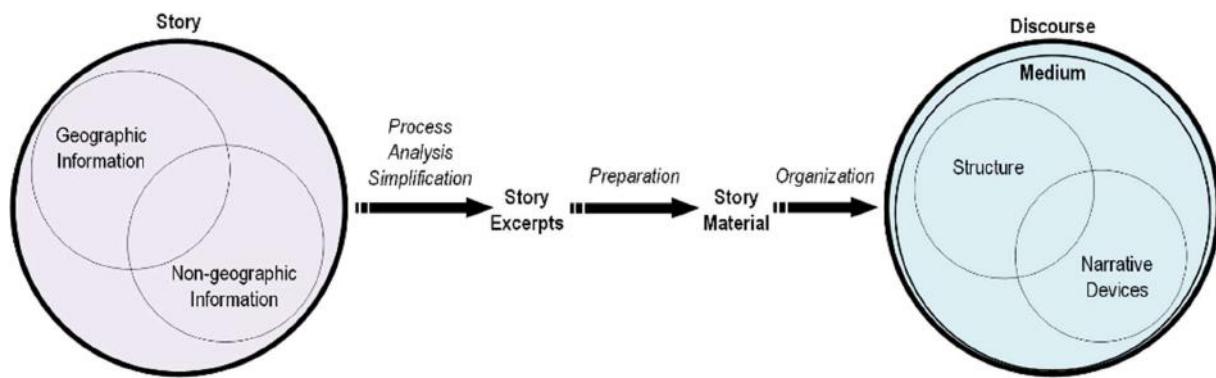

Figure 3-4. Diagram of inherent relationships between story and discourse.
Venn diagrams of Story and Discourse indicate inner elements and relationships as well. Figure by the author.

3.3. Elements of a Story

3.3.1. Non-Geographic Information

3.3.2. Geographic Information

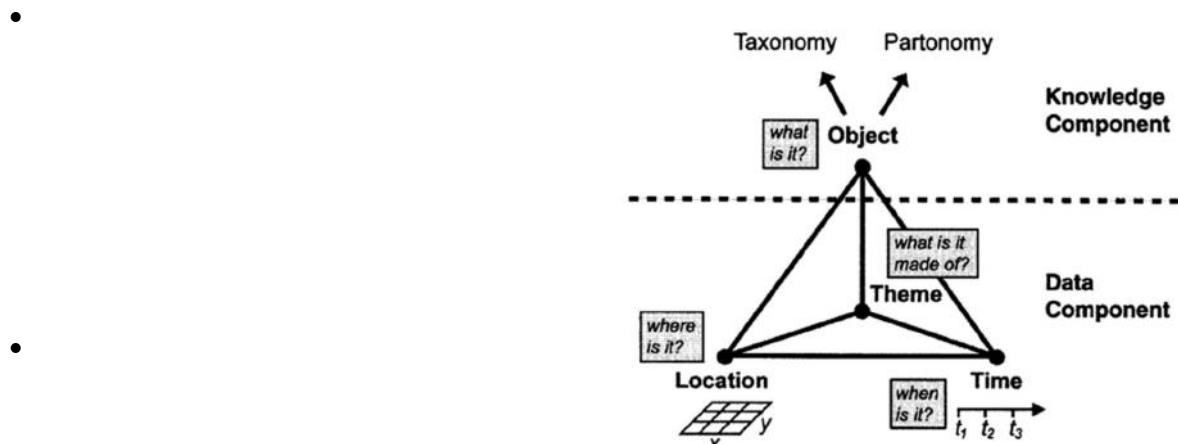

Figure 3-5. Mennis, Peuquet and Qian's (2000) pyramid framework for geographic representations.

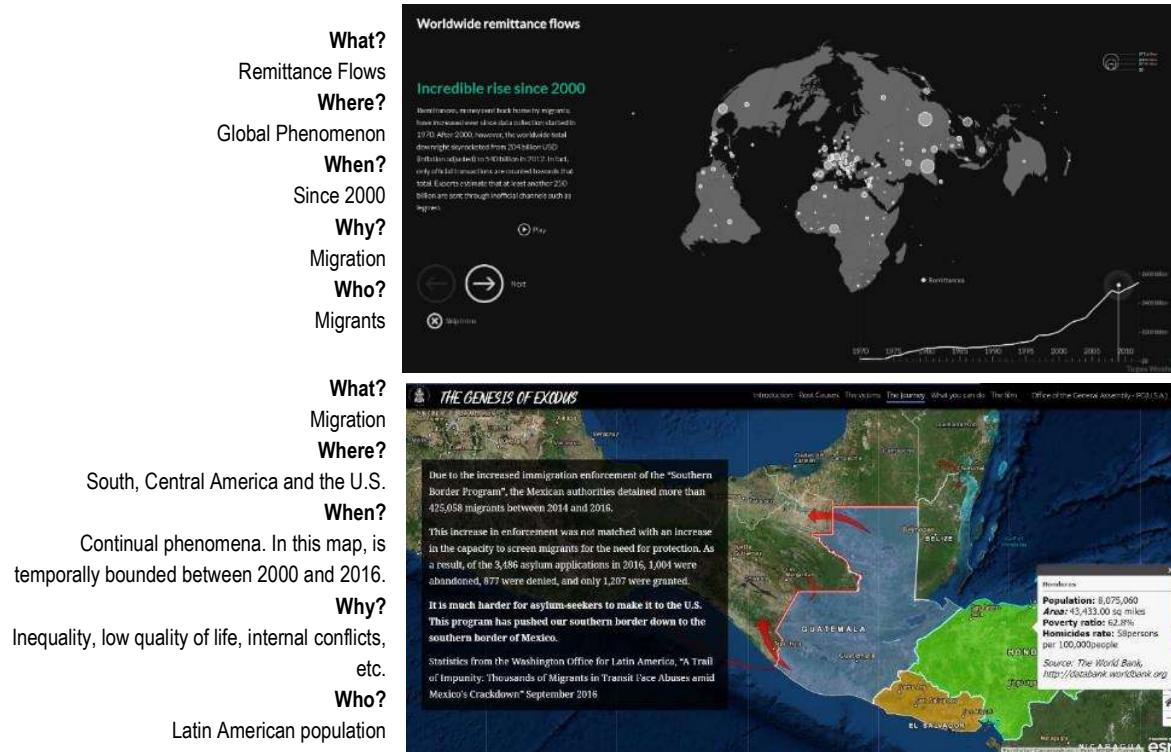

Figure 3-6. Two maps showing two different geographic phenomena at different scales and different data representations. At the top, a map showing the total amount of money sent back home by migrants worldwide. The map at the bottom is a snapshot of a document-like interface containing multiple forms of media and interactive maps for depicting the flow of migrants coming from Latin America. First map extracted from Bauer, Boyandin, & Stalder (2013). The second map was created by the Office of General Assembly and World Mission of the Presbyterian Church (Presbyterian Church Office of General Assembly & WM, 2017).

3.3.3. Other key characteristics of stories

-
-
-
-

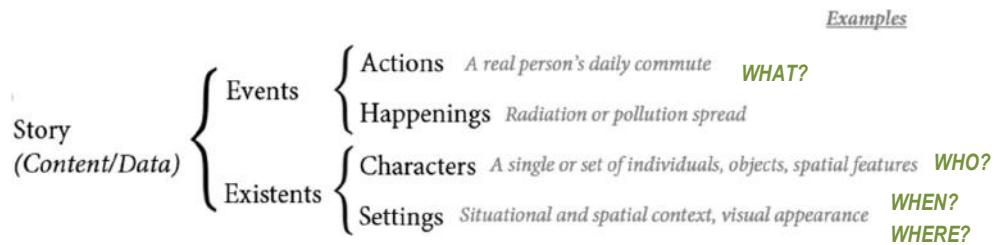

Figure 3-7. The elements of a story, exemplified with the 5W questions. The “why” in the story and its main message are shaped by the interaction of all the components at the lowest hierarchical level. Modified from Chatman (1978).

3.4. Discourse Elements

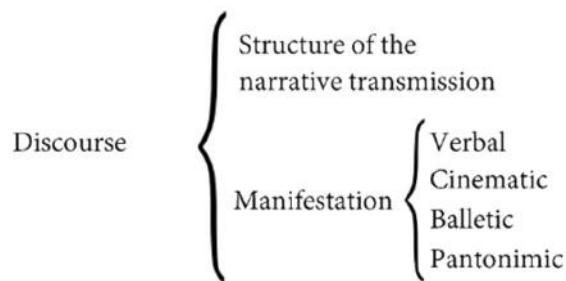

Figure 3-8. The elements of narrative discourse. Extracted from Chatman (1978).

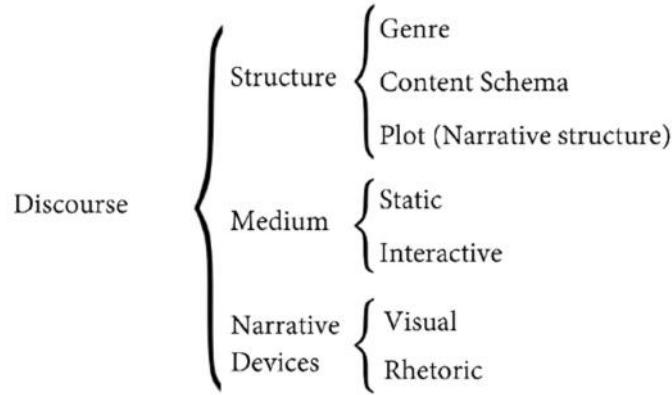

Figure 3-9. Elements of map discourse. Adapted from Chatman (1978).

3.4.1. Map-Based Visual Storytelling Genres (Visual Structure)

Genre	Definition

Table 3-1. Map-based visual storytelling genres. Reproduced from Song (2017).

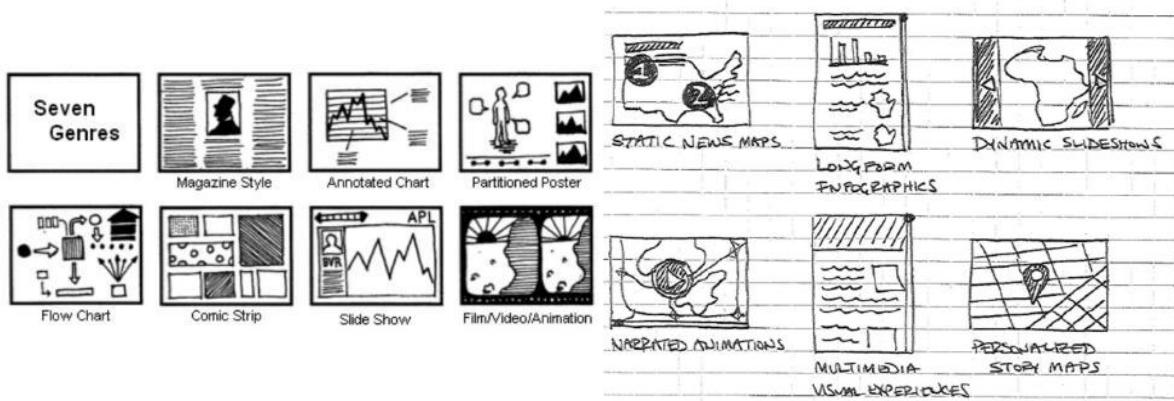

Figure 3-10. The Segel and Heer's (2010) seven genres of narrative visualization (left).
Roth's (2016) taxonomy of Map-based Visual Storytelling genres (right).

3.4.2. Content Schemas

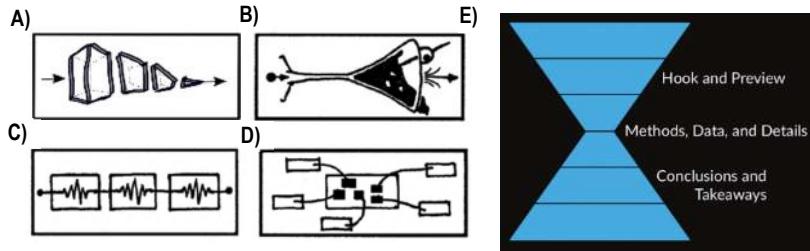

Figure 3-11. Content Schemas. Images B-D extracted from Segel and Heer (2010). Image A created by the author. Image E retrieved from Schwabish (2017).

3.4.3. Plots (Narrative Structures)

3.4.3.1. The Three-Act Narrative Arc

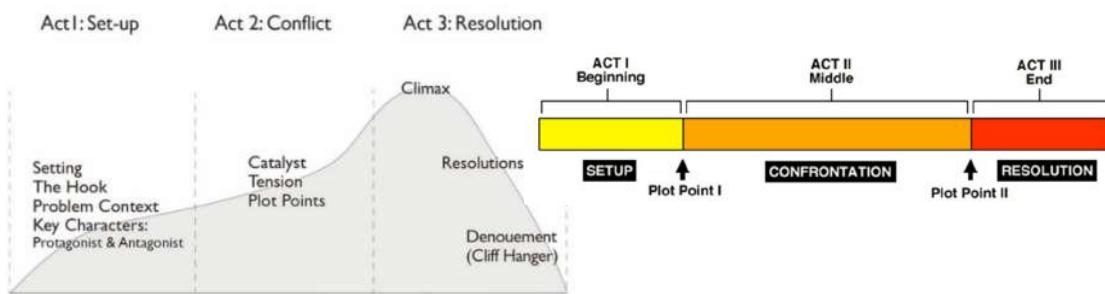

Figure 3-12. The three-act narrative structure plot. On the left, diagram after Young (2012). On the right: Herber, Schiffman, and Anavankot's (2011) linear variant.

Table 3-2. Description of the content and purpose of each act, according to Song (2017).

3.4.3.2. Narrative and Visual Narrative Structures

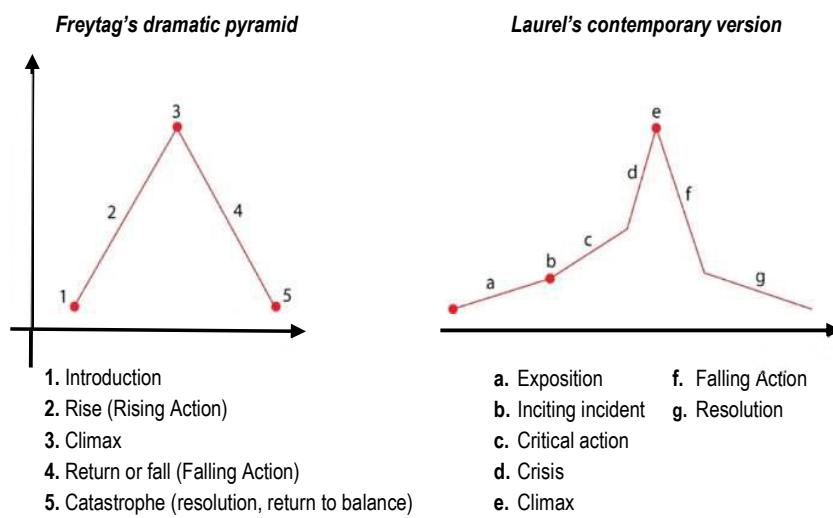

Figure 3-13. Freytag's dramatic pyramid (left) and Laurel's contemporary version of the same pyramid (right). Adapted from Tensen (2014).

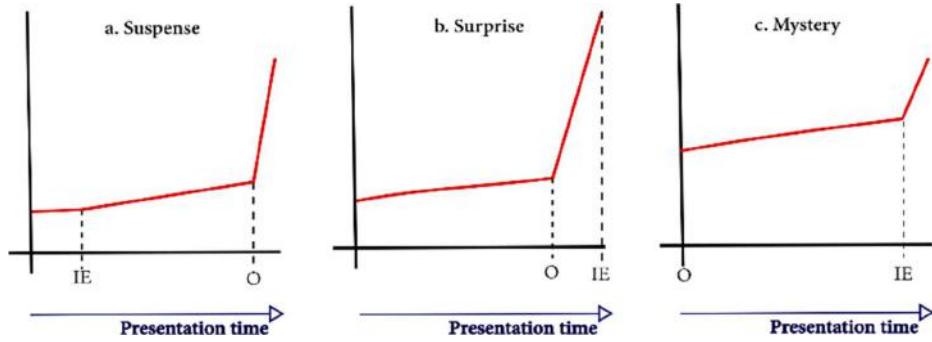

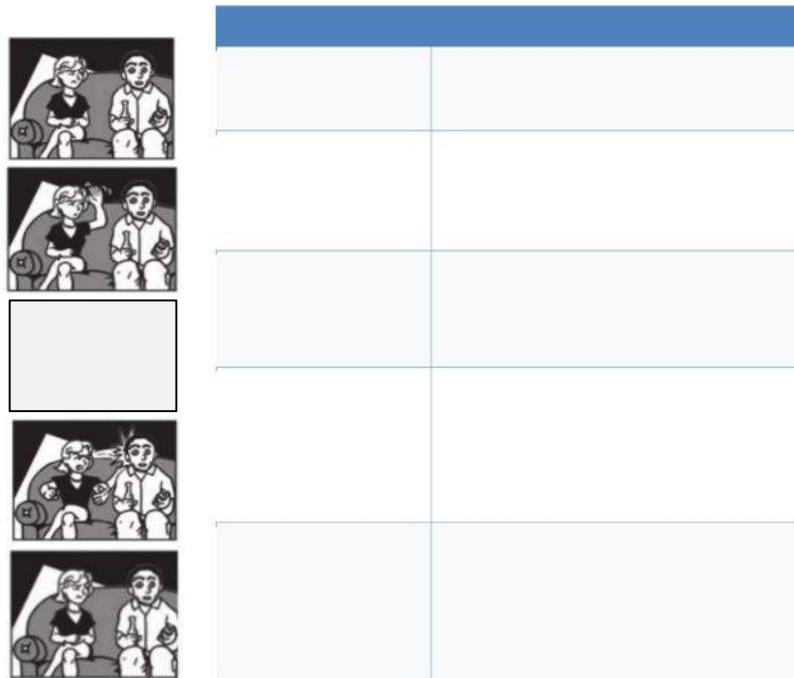

Figure 3-14. The three classical narrative procedures and their course of interest. (IE) is the generating event and (O) is the outcome.

- (a) **Suspense:** A cause is presented, but the effect is delayed,
- (b) **Surprise:** An effect is shown that later on appears to be incorrect,
- (c) **Curiosity/Mystery:** An effect is presented without further information. In the end enough information is given to reconstruct the cause.

Adapted from Tan (2013).

Phase → (Establisher) – (Initial (Prolongation)) – Peak – (Release)

Figure 3-15. Cohn's (2013) narrative categories. Images and table adapted from Cohn (2013).

3.4.3.3. The Eight Basic Plots in Earth Sciences

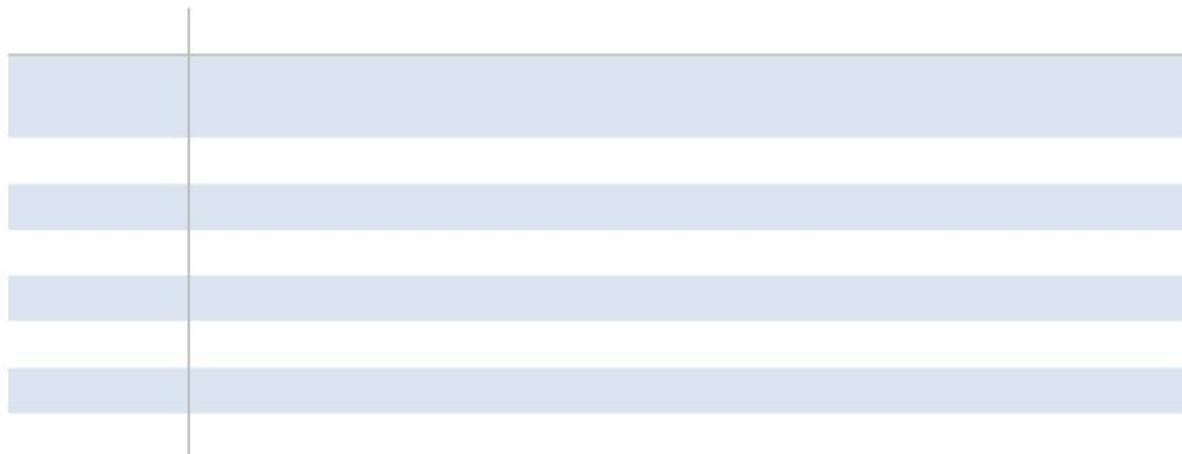

Table 3-3. The eight basic plots in the earth sciences. Adapted from Phillips (2012).

3.5. Synthesis

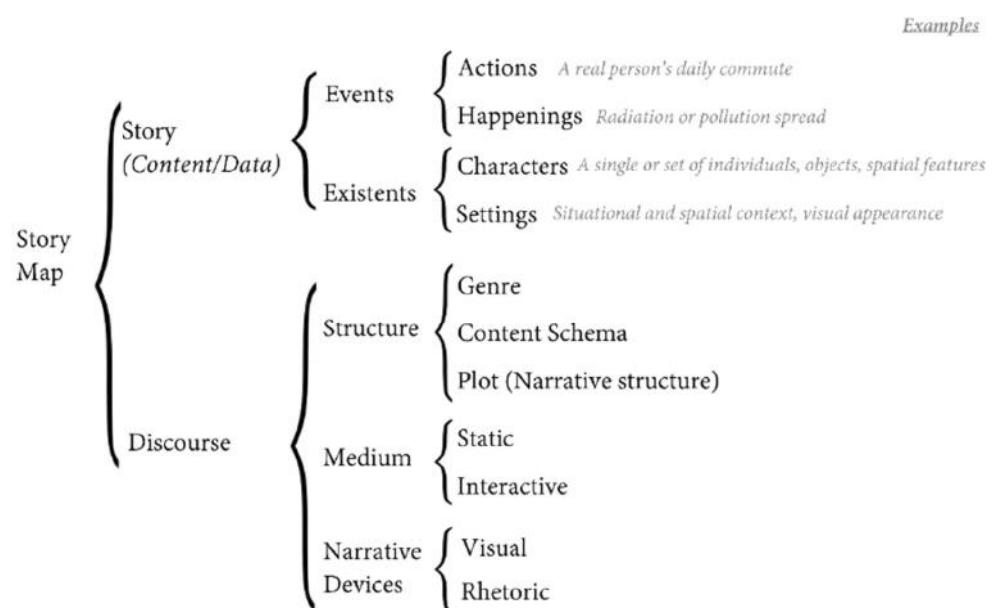

Figure 3-16. Hierarchical diagram comprising the components of a Story Map. Based on Chatman (1978).

Table 3-4. Definitions for the concepts: Narrative, Story, Discourse, Story Map.

4. METHODOLOGY

4.1. Thematic Analysis (Qualitative Data Collection)

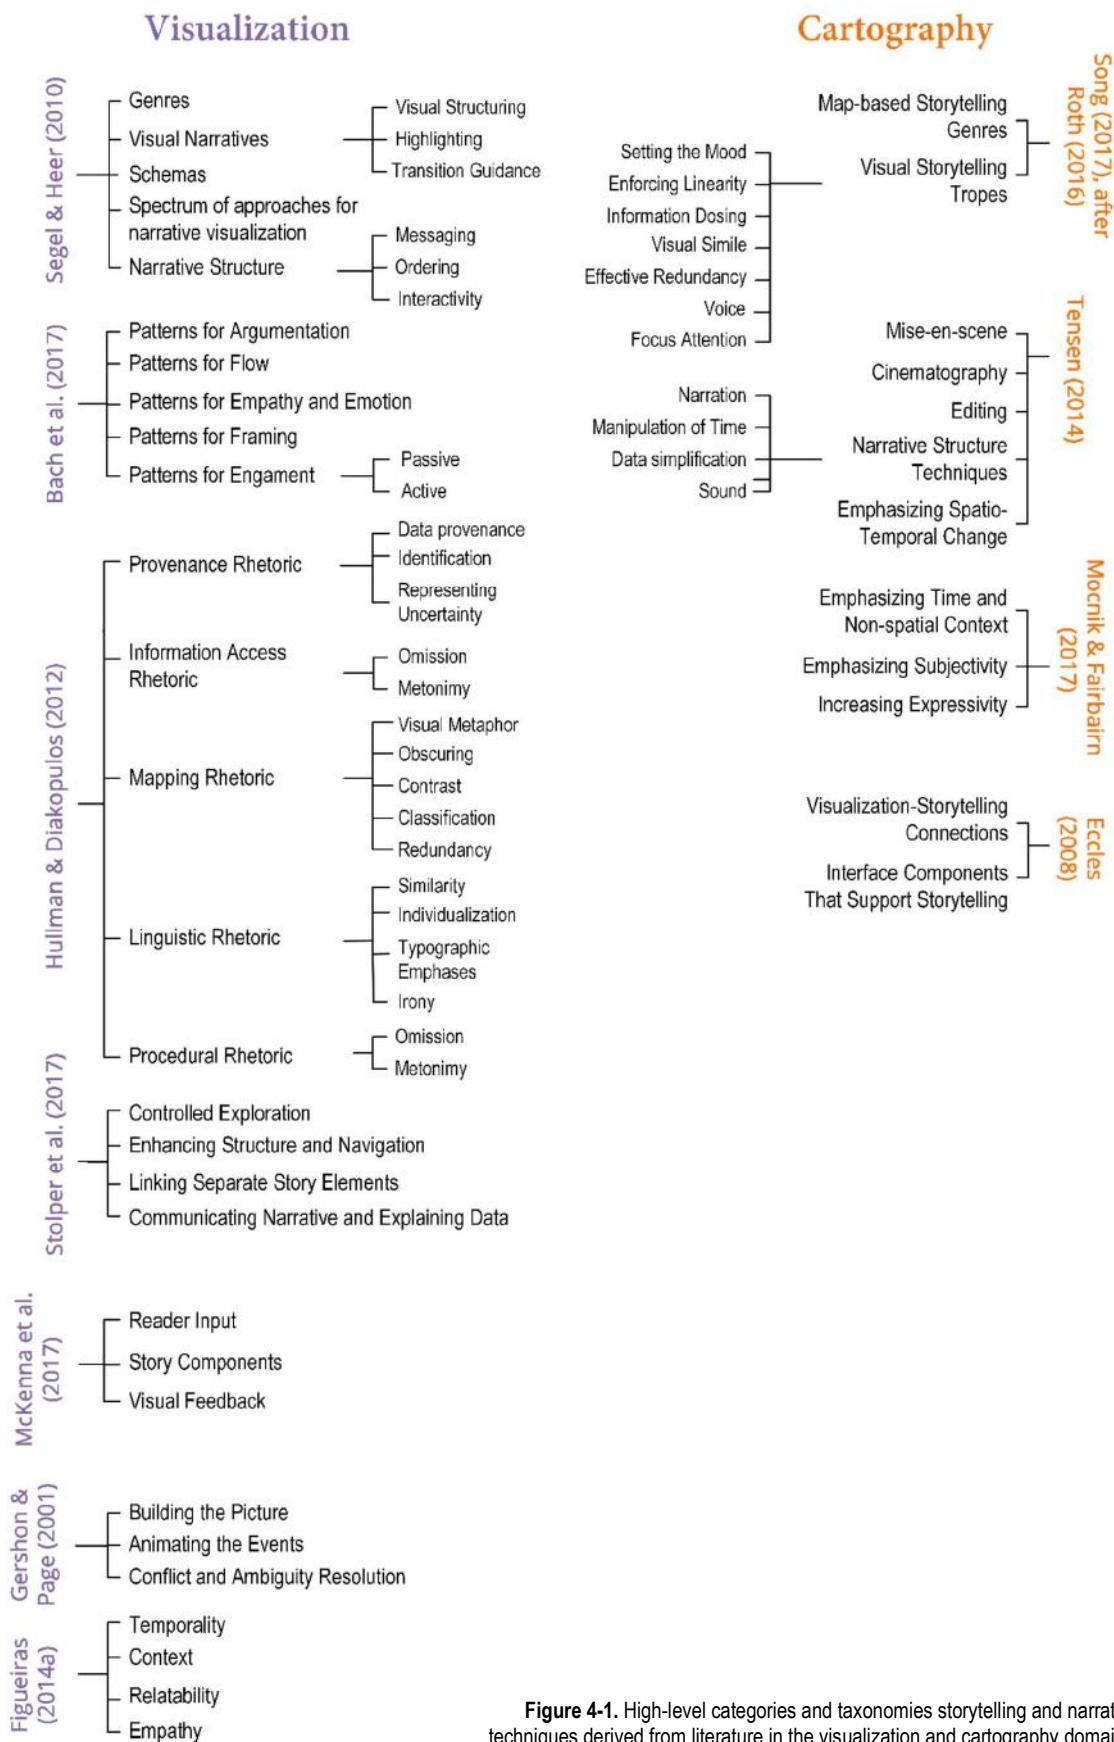

Figure 4-1. High-level categories and taxonomies storytelling and narrative techniques derived from literature in the visualization and cartography domains.

Table 4-1. Summary of the concepts extracted from the visualization subdisciplines. Numbers between parentheses indicate further low-level techniques within multi-level hierarchies.

Table 4-2. Summary of the most relevant concepts extracted from storytelling and narratives in cartography.
Numbers between parentheses indicate further low-level techniques within multi-level hierarchies.

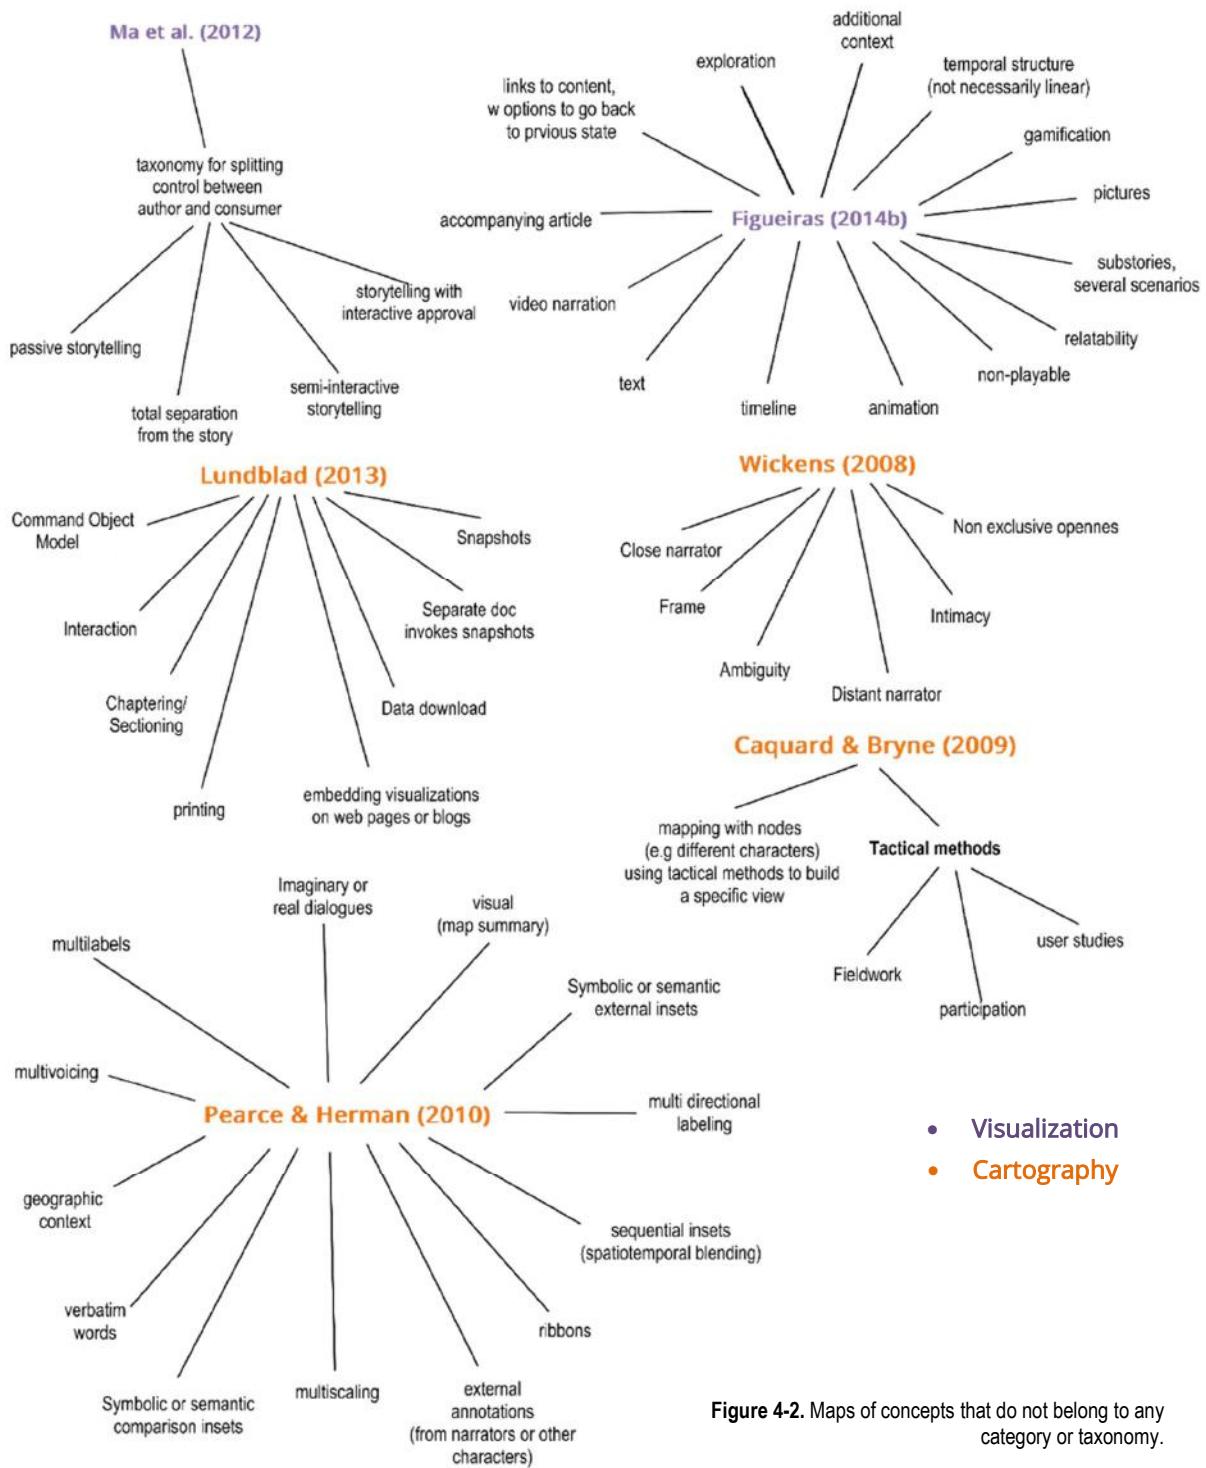

Figure 4-2. Maps of concepts that do not belong to any category or taxonomy.

4.2. Qualitative Data Integration

Table 4-3. Summary of the narrative/storytelling techniques integrated and categorized within the first major category: visual narrative tactics.

Table 4-4. Summary of the narrative/storytelling techniques integrated and categorized within the second major category: rhetoric devices.

4.3. Quantitative Content Analysis

ć

Table 4-5. Outline of the supplementary code sets for collecting further cartographic information during the Quantitative Content Analysis.

4.4. Reorderable Matrices

5. AN INTEGRATED FRAMEWORK

Figure 5-1. Concept map indicating how terminology will be addressed in this chapter

5.1. Visual Narrative Tactics

5.1.1. Main Design Alternatives

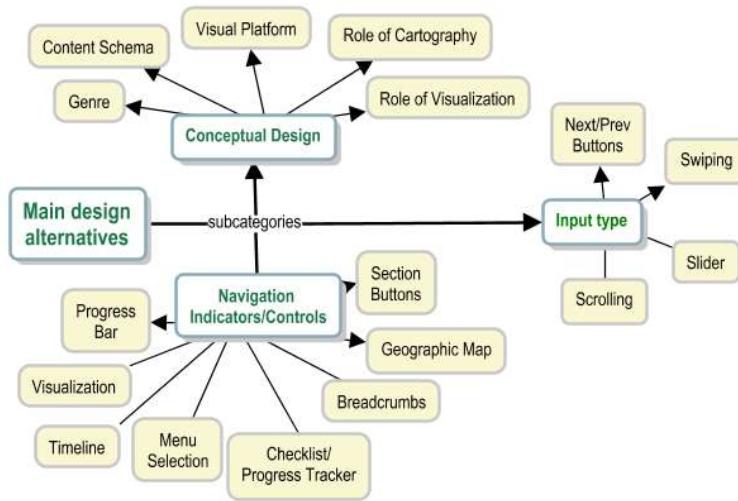

Figure 5-2. Concept map of the first subcategory of Visual Narrative Tactics.

6.3.1. Main Design Alternatives

6.3.1.1. Conceptual Design

Content Schema	Dynamic Slidesho..	Longform Infograp..	Multimedi a Visual ..	Narrated Animatio..	Personalized Stor..	Stationary Story Ma..
Drill-Down				2	3	9
Hourglass	2	2	5	3	2	
Inverted Pyramid	5	8	5	2	2	1
Martini	1			3	1	
Pyramid	2					
Unclear/Other				3		

Table 6-3. Frequency table of content schemas found in genres. Empty cells indicate no map with both characteristics was found.

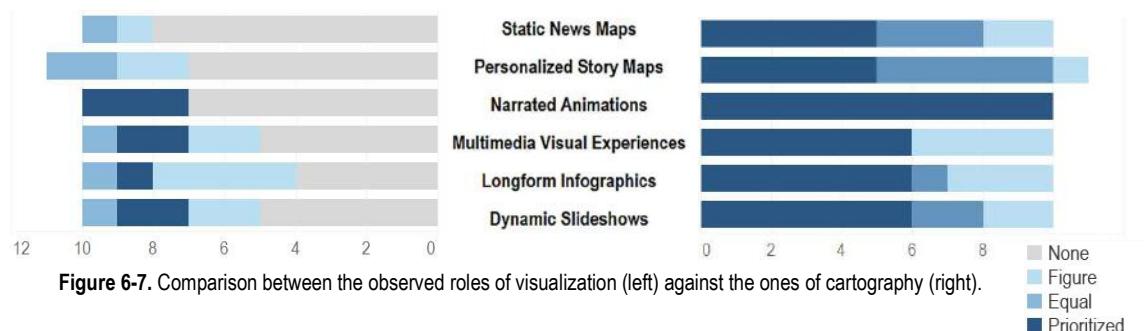

Figure 6-7. Comparison between the observed roles of visualization (left) against the ones of cartography (right).

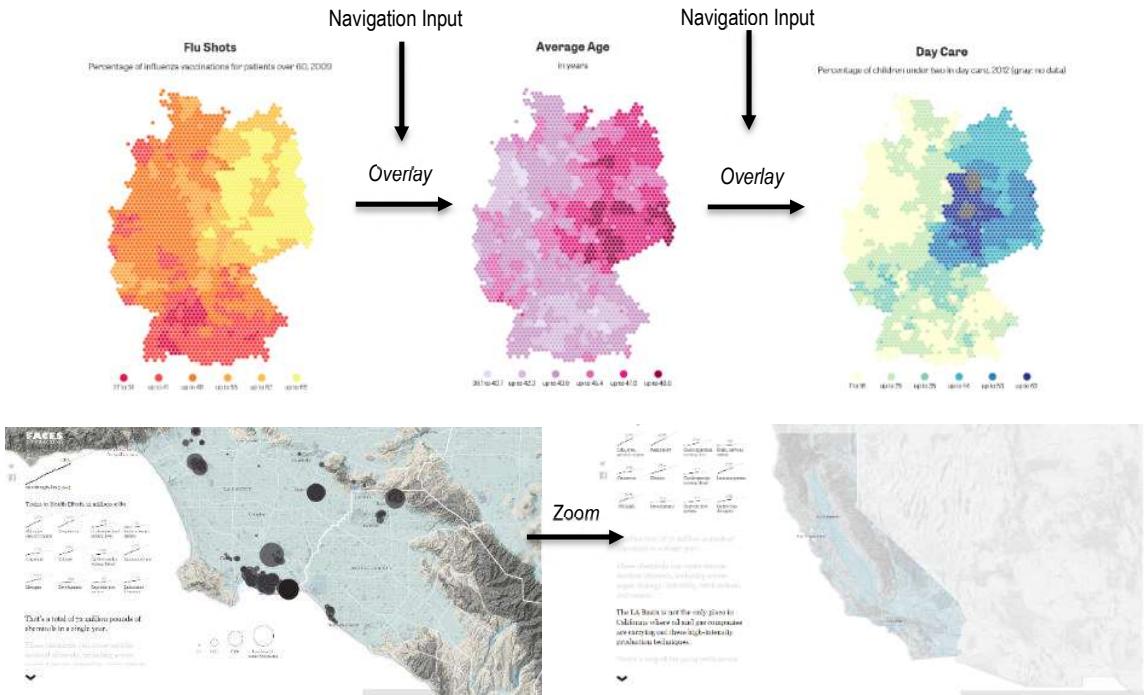

Figure 6-8. From top to bottom: Scrolling triggers the overlay operator in Zeit Online's "A Nation Divided" (Zeit Online, 2014). Below, scrolling also acts as an interactive interface for the Zoom operator in Flagg, Craig, & Bruno's (2014) "California is Getting Fracked".

Figure 6-9. "Britain's Royal Navy in the First World War" (Brohan, 2012). The visual platform is maintained as the animation runs.

6.3.1.2. Input Type

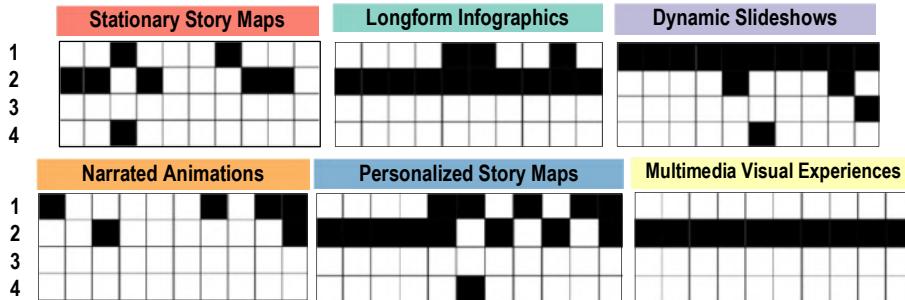

Figure 6-10. Symbolized binary tables depicting the existence of distinct types of navigation input across the map sample. Sample members have been grouped by genre, and numbering represents: (1) next/previous buttons, (2) scrolling, (3) swiping, and (4) sliders.

Figure 6-11. On the left, a Static News Map advances its content using section buttons only (populate, 2015). A play button stars a fully animated map depicting people movement across the globe in Elkanodata & Ticketbis (2015).

Figure 6-12. Navigation buttons, scrolling and a direct form of navigation have been incorporated into a single cartographic interface in (Chicago Metropolitan Agency for Planning [CMAP], 2014).

6.3.1.3. Navigation Indicators and Controls

Figure 6-13. Implicit forms of controlling and indicating navigation. Obtained and adapted from Smart (2012) (left), and Andrews, Watkins, and Ward (2015).

Figure 6-14. A navigation indicator serving multiple functions, implemented in “Travel the path of the solar Eclipse” (Karklis et al., 2017)

6.3.2. Navigation Feedback and Transition Guidance

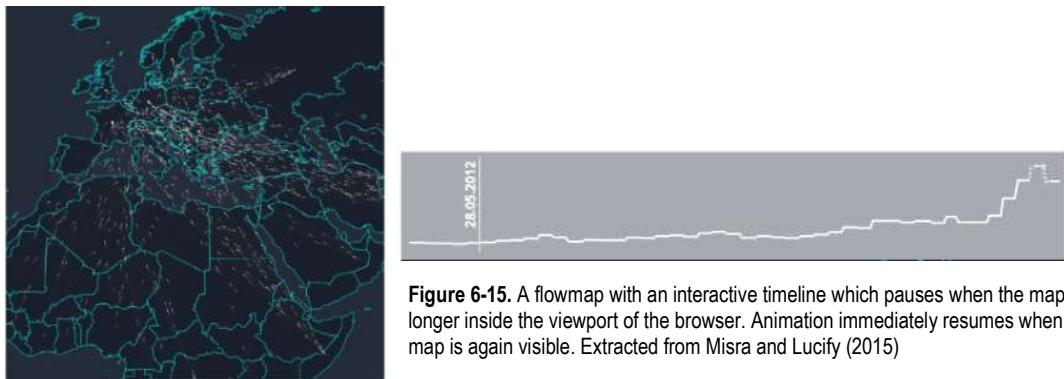

Figure 6-15. A flowmap with an interactive timeline which pauses when the map is no longer inside the viewport of the browser. Animation immediately resumes when the map is again visible. Extracted from Misra and Lucify (2015)

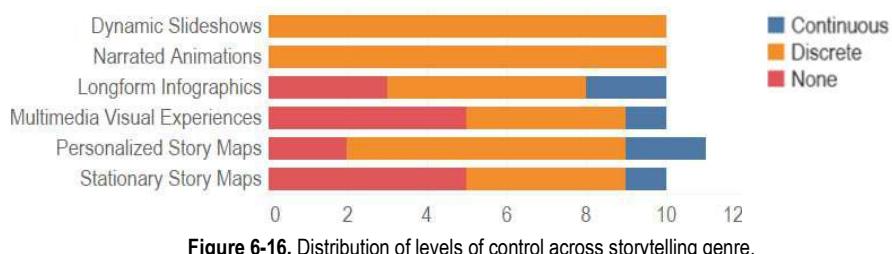

Figure 6-16. Distribution of levels of control across storytelling genre.

6.3.2.1. Editing

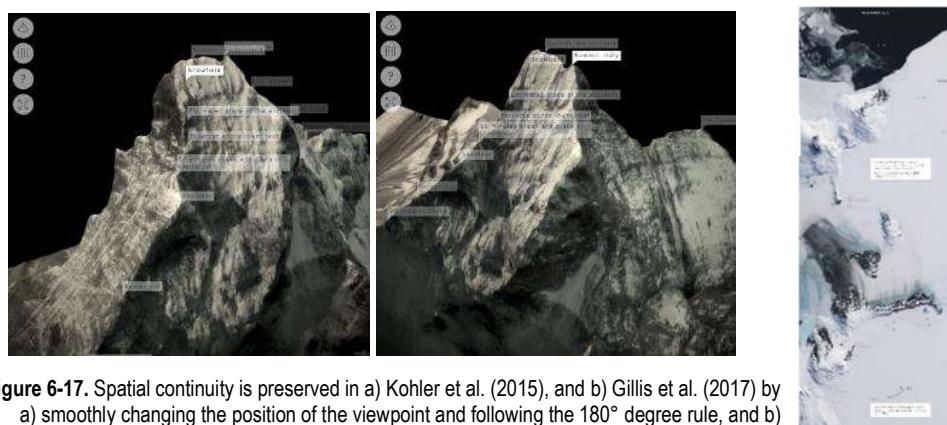

Figure 6-17. Spatial continuity is preserved in a) Kohler et al. (2015), and b) Gillis et al. (2017) by a) smoothly changing the position of the viewpoint and following the 180° degree rule, and b) spanning the whole map area vertically along the interface (more than 6000 pixels in the y axis).

6.3.3. Communication of Narrative and Information

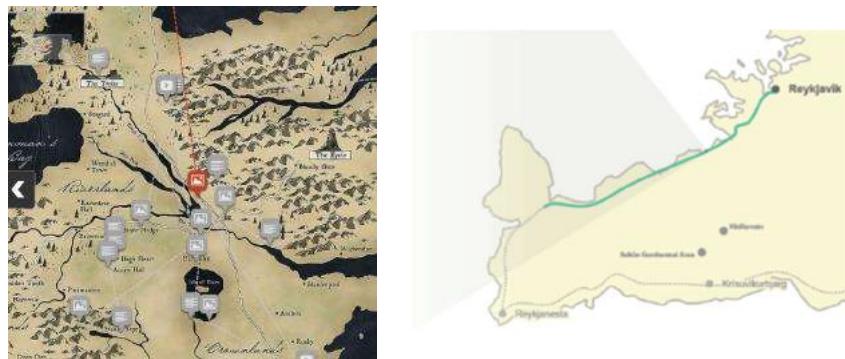

Figure 6-18. Trajectories are highlighted as the user generates input in Northwestern University KnightLab [NUK] (2014), and Bebber (2015).

6.3.4. Emphasis

6.3.5. Linking

Figure 6-19. On top: objects are linked by color and as text hyperlinks in “Election 2015: Where to vote tactically to get the prime minister you want” (Nardelli & Gutiérrez, 2015). Bottom: linking through symbol in “1812” (Nedkova et al., 2017).

6.3.6. Interaction

6.3.6.1. Control Split

Genre	Interactive Approval	Passive Storytelling	Semi-Interactive	Total separation
Static News Maps				10
Longform Infographics	5	5		
Dynamic Slideshows	2	5	3	
Narrated Animations	1	7		2
Personalized Story Maps	2	6		3
Multimedia Visual Experiences	4	5		1

Table 6-4. Distribution of genres across levels of control split

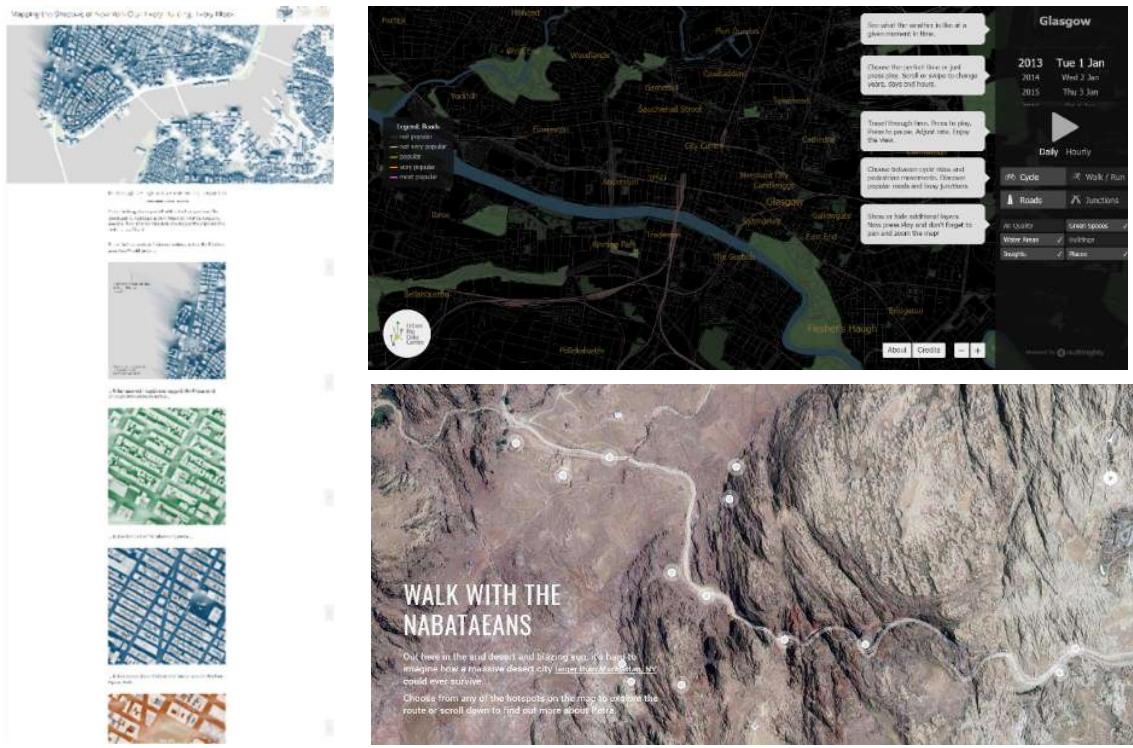

Figure 6-20. Different approaches to splitting control. On the left, an interactive map is placed at the beginning of the narrative in Quotprung and White (2016). On the right, narration begins after other forms of user input.

Urban Big Data Centre & Economic and Social Research Council [UBDC & ESRC], (2016), top. Google, (2015), bottom.

6.3.6.2. Operators

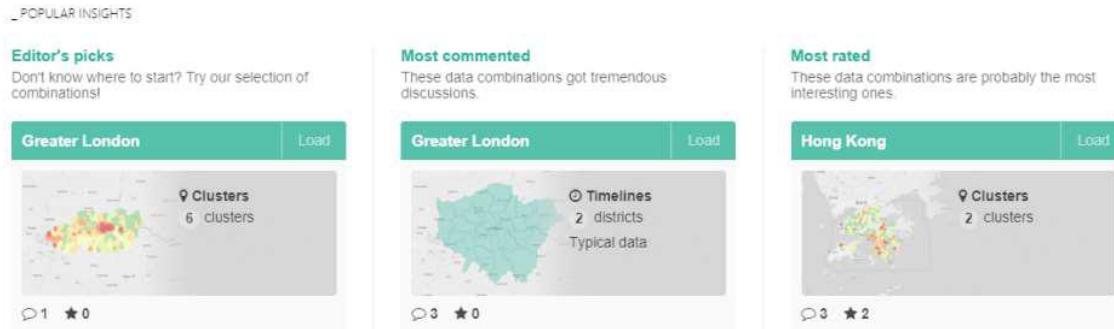

Figure 6-21. An example of snapshots generated via the save and annotate operators in a cartographic interface.
Extracted from Ratti et al. (2014).

6.3.6.3. Miscellaneous Capabilities

6.3.6.4. Interaction Cues

6.3.7. Summary

6.4. Rhetoric Devices

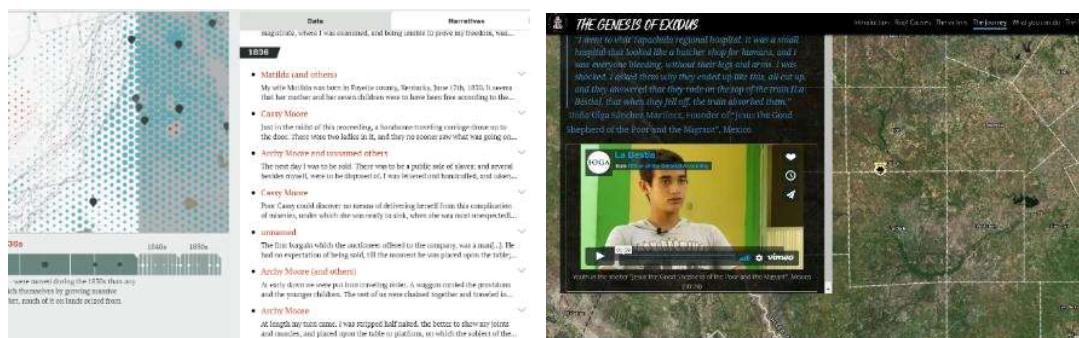

Figure 6-22. On the left map, substories are shown just in plain text. On the right a substory is depicted with media.

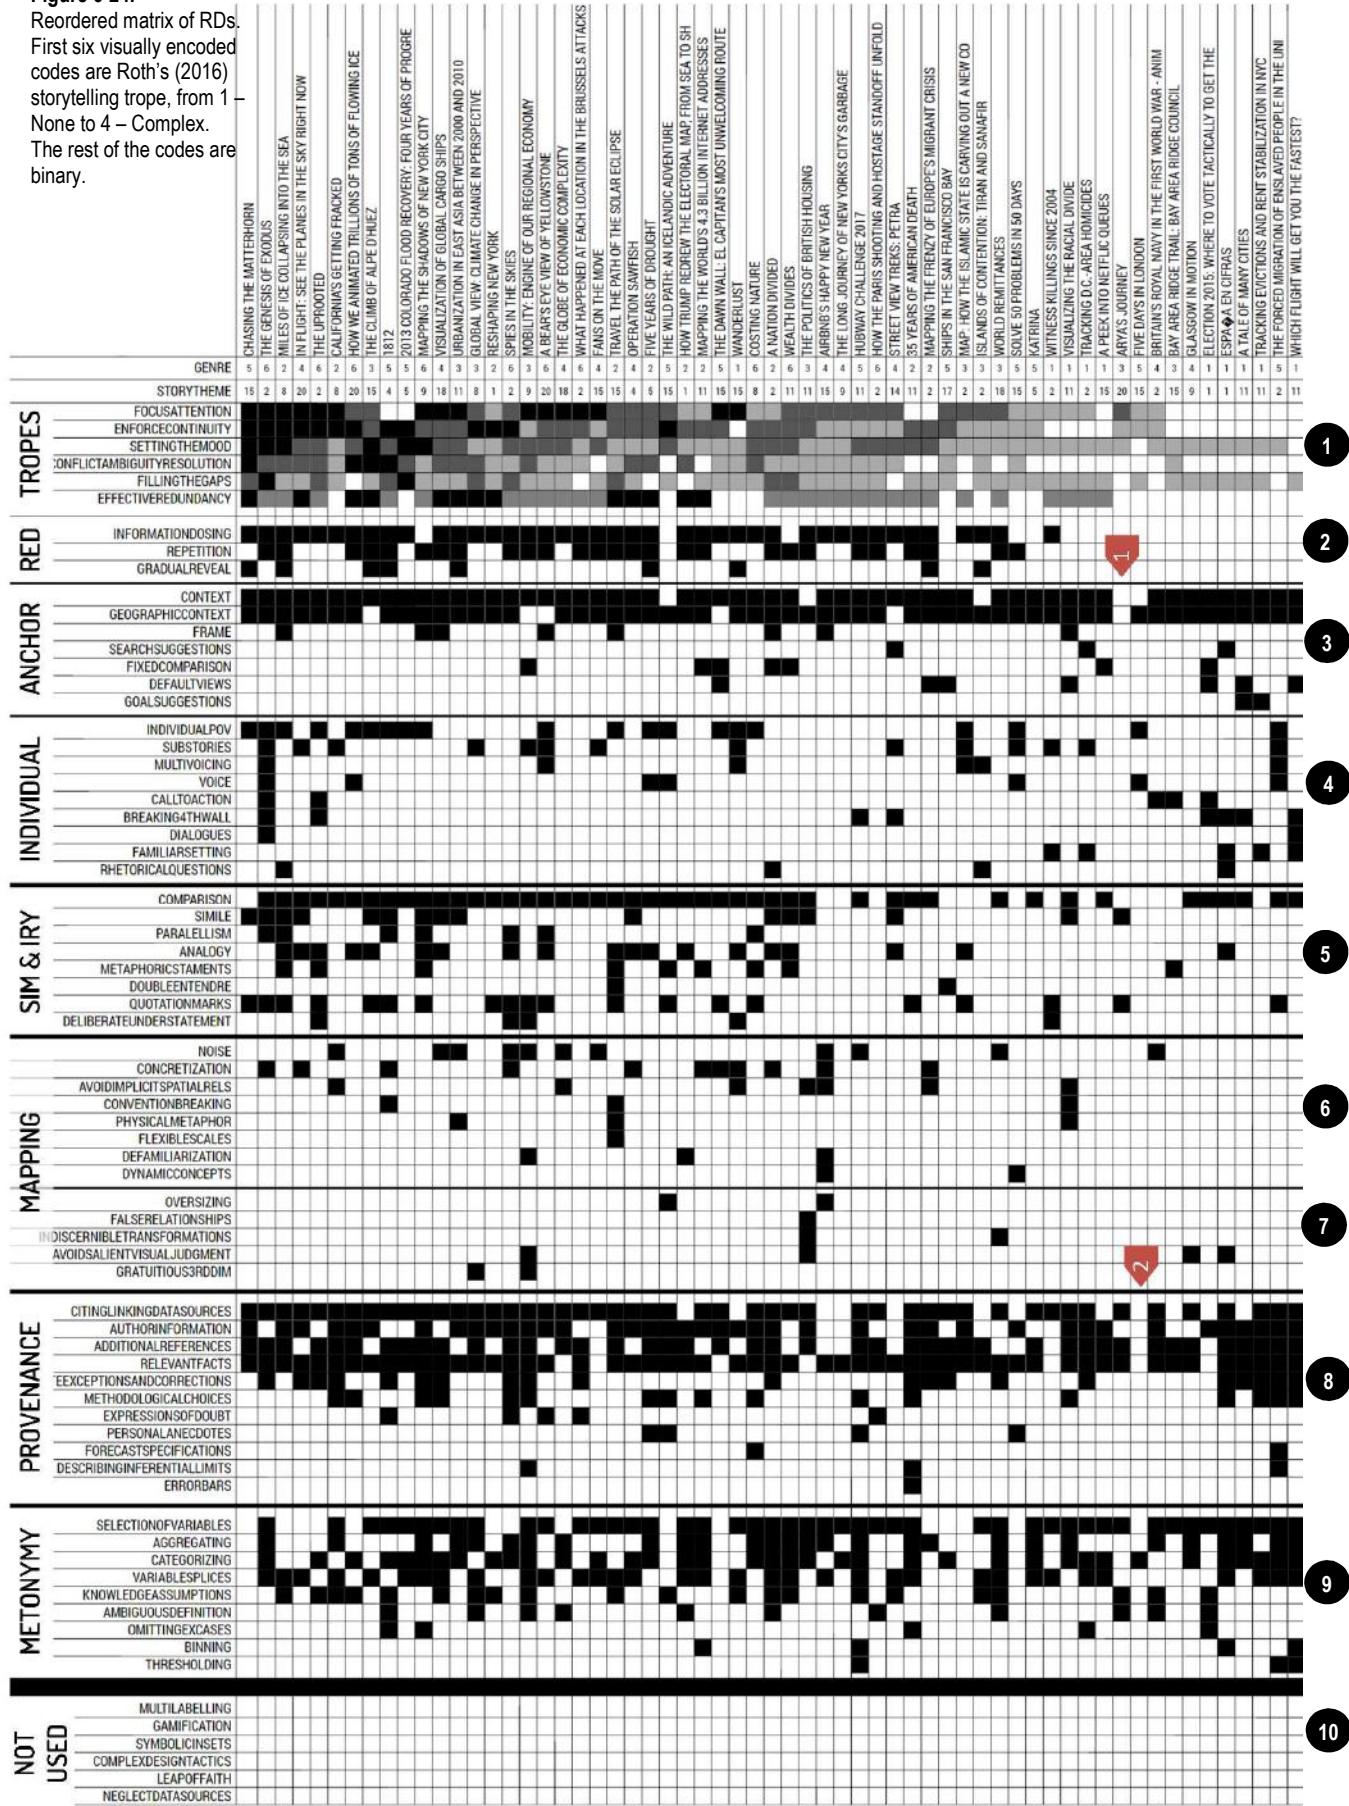

Figure 6-23. Destroyed and repaired roads are symbolized while showing an aerial picture of a message left by affected locals in Fischer (2017).

Figure 6-24.

Reordered matrix of RDs.
First six visually encoded
codes are Roth's (2016)
storytelling trope, from 1 –
None to 4 – Complex.

The rest of the codes are binary.

6.4.1. Procedural Rhetoric

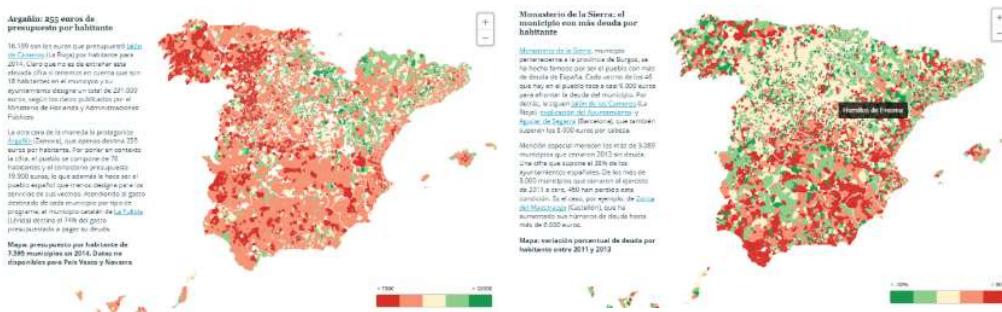

Figure 6-25. A divergent color scheme continually shows lower values in red color, then inverts the color scheme to show the same type of difference. Extracted from populte (2015).

6.4.2. Mapping Rhetoric

Figure 6-26. Comparison between a Static Map of the 2017 Total Eclipse (National Aeronautics and Space Administration, 2017) on the left, and a Longform Infographic depicting the same phenomenon dynamically (Karklis et al., 2017) on the right.

Figure 6-27. Distance encodes the disparity between racial make-up between neighboring tracts. Extracted from Vallandingham (2011).

Figure 6-28. "A World of Belonging on Airbnb". Extracted from Airbnb (2015).

6.4.3. Provenance Rhetoric

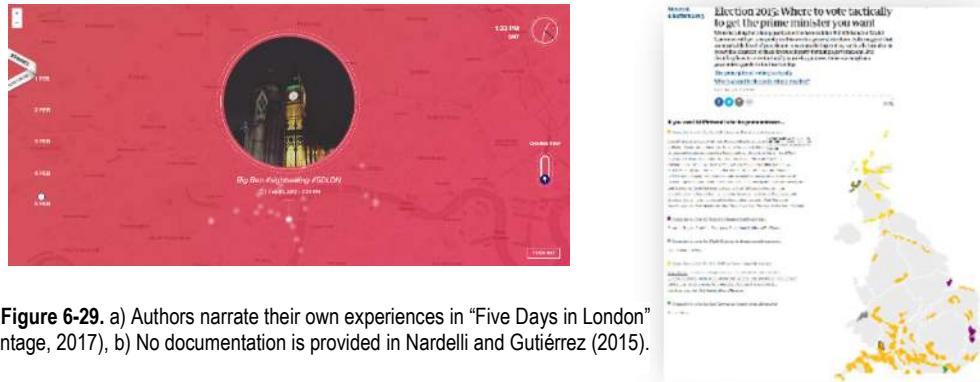

Figure 6-29. a) Authors narrate their own experiences in “Five Days in London” (Webadvantage, 2017), b) No documentation is provided in Nardelli and Gutiérrez (2015).

6.5. Conclusions and Summary

Figure 6-30. Fischer's (2017) "2013 Colorado Flood Recovery: Four Years of Progress".
A genesis plot was identified by the end of the narrative.

6.6. Reintegrating Concepts and Reexplaining the Story Map

•

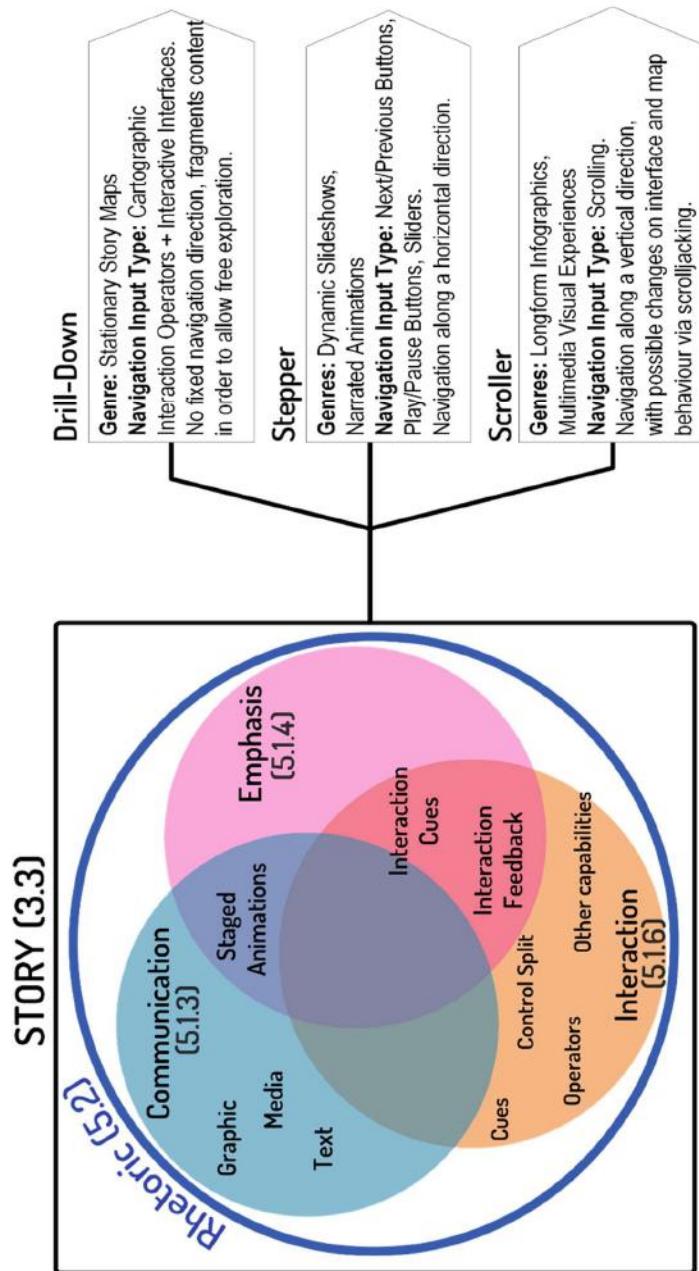

Figure 6-31. Integrated conceptualization of the Story Map. Numbering after concepts refer to section numbers.

7. CONCLUSIONS

7.1. Conclusions

7.2. Limitations

7.3. Future Work

APPENDIX B – MULTI-LEVEL HIERARCHY CONCEPT DIAGRAMS

APPENDIX C – QUANTITATIVE CONTENT ANALYSIS CODES

C	Categorical Code	Category. From Roth, (2016)
O	Ordinal Code	Code. From Roth, (2016)
B	Binary Code	High-level concept.
S	Scalar	Low-level concept

METADATA		
S	<i>Producer</i>	
	<i>Producer Type</i>	
	<i>Year</i>	
S	<i>Number of Maps</i>	
MEDIUM		
O	Size	The size of the map relative to the available space, using the most prominent dimension.
	1 Small	Less than or equal to one-quarter
	2 Intermediate	Between small and large
	3 Large	More than or equal to half, but not full bleed
	4 Full	Full bleed on vertical or horizontal axis
TECHNOLOGY		
O	Multiscale	The inclusion of multiple levels of information detail, typically activated when changing map scales.
	1 One	One level of detail
	2 Limited	2 levels of information detail
	3 Comprehensive	3+ levels of information detail
C	Real-Time	The way in which information updates are made to the map content.
	1 None	No updates
	2 Updates, Manual	Updated manually by cartographer
	3 Updates, Automated	Updated automatically using data-feed
C	Social Media	The way in which readers/users can contribute to the map.
	1 None	No social functionality
	2 Social, no-VGI	Social component (e.g., discussion board, share on Twitter/FB), but no VGI
	3 Social, VGI	Social component, including VGI (i.e., add information to the map, typically given the user's location)
C	Animation	The additional enablements for dynamic cartography provided by the online, digital medium.
	1 None	No animation; static
	2 Passive Animation	System controlled animation, no user control
	3 Active Animation	User-controlled animation of the map
C	Function of Animation	The purpose of using animation on the interface and its content
	1 Navigation Feedback	Dynamics are activated only to provide input response
	2 Advancing the story	Interface or map dynamics are meaningful to the story (in time and/or space)
	3 Both	
	4 Other	
PROJECTION		
C	Class	The shape of the developable surface onto which the reference globe is projected, and the resulting distorted map shape
	1 Cylindrical	Cylindrical developable surface, resulting in a rectangular map shape
	2 Conic	Conic developable surface, resulting in a semi-circular map shape
	3 Planar	Planar developable surface, resulting in a circular map shape
	4 Compromise	Projection determined by a mathematical function (identifiable on small scale only)
	5 Unclear	Unclear class, including illustrated maps that were not projected digitally and large-scale maps with minimal projection distortion
C	Orientation	The rotation of the map relative to the Earth's axis of rotation
	1 Conventional	North is 'up'
	2 Non-conventional	North is not 'up'
C	Perspective	The angle at which the reference globe is projected to the developable surface.
	1 Planimetric	Projected 'top-down', at nadir
	2 Oblique	Not projected at nadir, including illustrated maps with an intentional 3-dimensional perspective
O	Scale/Extent	The relationship between distance measurements on the map and the Earth, impacting the geographic extent of the map.
	1 Municipal	Large scale; extent of a metropolitan area or more local
	2 Regional	Intermediate scale; extent of region within a country (e.g., single or multiple admin1 units, such as states or provinces), or single inland lake or river basin
	3 Country/Sea	Intermediate scale; extent from a single country (admin0) to set of adjacent countries, or a single non-oceanic sea

4	Continental/Oceanic	Small scale; extent of entire continent or ocean
5	World	Small scale; extent of single hemisphere to entire globe
CONTENT		
O	Information Density	The relative amount of geographic information depicted in the map.
1	None	No real geographic information are communicated, with the map instead used as an illustration or abstract art
2	Light	Few depicted geographic features
3	Intermediate	Between information light and dense
4	Dense	Many depicted geographic features
O	Visual Hierarchy	The degree to which map features contrast from their surroundings, resulting in a coherent visual hierarchy (does not include labels)
1	None	No contrast differences, and thus no discernable visual hierarchy
2	Simple	1-2 discernable contrast variation(s), resulting in a simple visual hierarchy
3	Intermediate	Between limited and extensive visual hierarchy
4	Complex	Many discernable contrast variations, resulting in a complex visual hierarchy
C	Basemap Type	The context information included beneath the primary symbolization for context. (NOTE: Check all for interactive maps, but indicate the default for the cluster analysis)
1	None/Abstract	No basemap used for context
2	Vector Map	Only vectors used for basemap context
3	Imagery	Aerial photography or satellite imagery
4	Terrain	Contours, hillshade, or shaded relief
5	Combination	Overlay of multiple basemaps
SYMBOLIZATION		
O	Attribute Symbolization	The number of attributes symbolized in the map.
1	None	No attribute information (only spatial and/or temporal)
2	One	1 attribute depicted
3	Two	2 attributes depicted
4	Many	3+ attributes depicted
C	Temporal Symbolization	The type of temporal information symbolized in the map.
1	None	No temporal information (only spatial and/or attribute)
2	Events	Specific timestamps depicted
3	Intervals	Time ranges depicted
4	Change	Change between events or intervals depicted
C	Thematic Map Type	The mapping technique used to symbolize attribute or temporal information. (NOTE: Check all for interactive maps, but indicate the default for the cluster analysis)
1	None	Reference map; spatial information depicted only
2	Proportional Symbol	Point representation; resized by value
3	Dot Density	Point representation; density determined by value
4	Iconic Point Symbol	Point representation; shape/icon by value
5	Isoline	Line representation; line location depicting value
6	Flow Map	Line representation; colored, shaded, or sized by value
7	Choropleth	Area representation; colored, shaded, or textured by value
8	Cartogram	Area representation; resized by value
9	Value-by-alpha	Area representation; transparency determined by value
10	Surface	Area representation; colored or shaded between isolines for value
11	Prism	Area representation; prospective height for value
12	Combination	2+ thematic maps used in single map (NOTE: We will need to create a copy for cluster analysis that makes this mutually exclusive)
13	Other	Non-traditional, innovated mapping technique used to depict attribute or temporal information
COMPOSITION		
C	Layout	The arrangement of map and non-map elements.
1	Isolated	The map itself is the only component of the page
2	Fragmented	Map and non-map components separated visually into different frames
3	Fluid, Uneven	Map and non-map components share a frame; map unemphasized in optical center
4	Fluid, Balanced	Map and non-map components share a frame; map emphasized in optical center
C	Aspect Ratio	The ratio of the vertical to horizontal axes of the space dedicated to the map.
1	Portrait	More vertical than horizontal
2	Landscape	More horizontal than vertical
3	Square	Equal dimensions, including non-square frames whose major and minor axes are difficult to determine
C	Map Title	The location of the map title in the page, using the most prominent if multiple map headings.
1	None	No map title
2	Caption	Included as caption
3	Legend Only	Included in legend
4	Subheading	Subheading separate from main heading of story
5	Main Heading	Main heading of story
C	Map Legend	The type of symbols or symbol classes described in the legend.
1	None	No map legend
2	Nominal	Symbols/symbol classes described nominally

3	Ordinal	Symbols/symbol classes described ordinally
4	Numerical	Symbols/symbol classes described numerically
5	Combination	Combination of nominal, ordinal, and numerical symbol/symbol class descriptions
C Indication of Scale		The indication of scale included for the map.
1	None	No indication of scale
2	Scale Bar Representative	Visual description, providing benchmark example
3	Fraction	Mathematical description, maintain measurement unit
4	Verbal Statement	Verbal description, changing measurement unit
C Indication of North		The indication of north included for the map.
1	None	No indication of north
2	North Arrow	Visual compass icon
3	Graticulate	Visual imposition of geographic or another coordinate system
C Context Maps		The contextual maps embedded within the map depiction explicitly supplementing the given map (i.e., not a sequence of maps in a single story).
1	None	No context maps.
2	Inset Map	Map showing a portion of mapped extent at a large scale.
3	Location Map	Map showing area surrounding mapped extent for identification.
VISUAL STORY STRUCTURE		
C Story Theme		The primary topic or theme serving as the content of the story.
1	Politics, Domestic, Non-violent	Government, legislation, electoral, parties, non-violent protests, non-violent strikes
2	Politics, Domestic, Violent	Riots, terrorism, civil conflict, civil war, coups
3	Politics, International, Non-violent	International relations, negotiations, agreements (non-trade)
4	Politics, International, Violent	Military conflict, war, defense issues, territorial disputes, forced relocation
5	Disaster Events, Natural	Earthquakes, weather-related events (floods, hurricanes, avalanches, tornados), epidemics, etc.
6	Disaster Events, Human	Accidents, explosions, fires, industrial disasters, etc.
7	Science, Medical	Biomedical research, disease prevention and intervention, public health
8	Science, Natural	Environmental problems, environmental impacts, climate change, pollution, conservation and preservation
9	Environmental	Transportation, development and planning, civil engineering
10	Science, Urban Built Environment	Agriculture, fisheries, logging, land use, resource management
11	Society, Demography	Demographics, social trends, housing, employment, education
12	Society, Public Safety	Crime, courts, judicial activity, policing, missing persons
13	Society, Human Rights	Famine, representation, equality
14	Cultural, Heritage	History, geography, archaeology, the arts and humanities
15	Cultural, Entertainment	Travel, tourism, recreation, sport
16	Cultural, Human Interest	Celebrity, scandals (non-political), VIPs, gossip
17	Economics, Local	Microeconomics, business, finance, industry, commerce
18	Economics, Global	Macroeconomics, trade agreements, international monetary issues, foreign aid, economic development, NGOs
19	Economics, Advertisement	Advertisement, political message, brochure
20	Unclear, Other	The story topic is unclear or different from other stories
C Rhetorical Style		The aesthetic, emotional, or artistic style evoked to enhance and inform the visual story.
1	Authoritative	The style of scientific visualization. Scientific, official, and magisterial
2	Understated	Minimalist, they appear to just present facts. Extremely judicious in the use of data
3	Propagandist	Almost exclusively created to quickly and succinctly communicate certain policies, agendas, ideology or jingoist messages
4	Sensationalist	Attempt to overwhelm one's senses with a barrage of, often irrelevant, data and visualizations
5	Other	No identified rhetorical style
C Plot Structure		The sequence or progression of events in the story, focusing on the relationships and changes of characters or conditions.
1	Cause/Effect	Impact of input characters/conditions on different, output characters/conditions
2	Genesis	Creation or development of new characters/conditions
3	Emergence	New characters/conditions emerge, often unpredictably, due to other processes
4	Metamorphosis	Wholesale reorganization, rearrangement, or modification of characters/conditions
5	Destruction	Loss, disappearance, degradation of characters/conditions
6	Convergence	Convergence of different paths towards similar output characters/conditions
7	Divergence	Divergence of similar input characters/conditions on different paths
8	Oscillation	Cyclical or recurring changes or transitions in characters/conditions
9	Unclear, Other	The plot structure is unclear or different from other stories

VISUAL STORY CONTENT		
Narrative text (excluding introduction/summary/synthesis/conclusion)		The amount of text included in the story.
O Maps <ul style="list-style-type: none"> 1 None 2 Light 3 Intermediate 4 Dense 		No story text beyond labeling and map elements 1 paragraph or less Between text light and dense 1 page or more (5+ paragraphs for websites)
1	One	1 map
2	Two, Unordered	2 maps, no explicit order for reading
3	Two, Ordered	2 maps, explicit order for reading
4	Many, Unordered	3+, no explicit order for reading
5	Many, Ordered	3+, explicit order for reading
Visualization s (Static)		The number of non-map information graphics included in the story, not including maps.
1	None	No information graphics included.
2	One	1 infographic
3	Two	2 infographics
4	Many	3+ infographics
Visualization s (Interactive)		The number of non-map interactive information graphics included in the story, not including maps.
1	None	No information graphics included.
2	One	1 infographic
3	Two	2 infographics
4	Many	3+ infographics
Images		The number of images included in the story, not including the basemap.
1	None	No pictures or images, not including the basemap
2	One	1 image
3	Two	2 images
4	Many	3+ images
Audio Narration		The number of audio narrations included in the story.
1	None	No embedded audio narration, not including audio feedback provided through the map
2	One	1 narration
3	Two	2 narrations
4	Many	3+ narrations
Sound		Non-narrative audio accompanying the animation
1	None	No sound whatsoever
2	Diegetic	Takes place within the narrative; the scene or stage the user is located. May also allude to user interaction
3	Non-diegetic	Used for creating an atmosphere, background and context. Is not visually relatable to anything in the stage the user is located.
4	Diegetic and non-diegetic	Both types of sound are employed.
Video Narrations/Demonstrations		The number of video narrations/demonstrations included in the story
1	None	No embedded video narration/demonstration
2	One	1 narration/demonstration
3	Two	2 narrations/demonstrations
4	Many	3+ narrations/demonstrations
VISUAL STORYTELLING TROPS		
Setting the Mood (i.e., Introduction)		The use of visuals and text to introduce the setting, the primary characters or places in the story, and the overall problem context.
1	None	No attention to setting the mood
2	Simple	Minimal introduction beyond the title
3	Intermediate	Between a simple and complex introduction
4	Complex	Great attention to giving an introduction
Conflict/Ambiguity Resolution (i.e., Conclusion)		The use of visuals and text to come to a conclusion, redefining the setting, giving closure to the established characters or places in the story, and summarizing the overall problem context/message.
1	None	No attention to conflict/ambiguity resolution
2	Simple	Minimal conclusion or summary beyond the map elements
3	Intermediate	Between a simple and complex conclusion/summary
4	Complex	Great attention to giving a conclusion or summary
Enforce Continuity (i.e., Linear Storytelling)		The use of visuals and text to unify disparate pieces of information through a linear structure.
1	None	No attention to enforcing continuity
2	Simple	Minimal logical flow in the story
3	Intermediate	Intermediate logical flow and cohesion

		4 Complex	Complex logical flow and cohesion
O	Focus Attention (i.e., Accenting)	The use of visuals and text to emphasize the important details that the reader cannot miss.	
	1 None	No attention to accenting	
	2 Simple	1 form of accenting used	
	3 Intermediate	2 forms of accenting used	
	4 Complex	3+ forms of accenting used	
O	Effective Redundancy (i.e., Motifs)	The use of visuals and text to repeat important details essential to the message, often through use of motifs or recurring visual elements in the story.	
	1 None	No noticeable, recurring visual motifs (i.e., styling, color, type across story elements)	
	2 Simple	1 recurring visual motif used	
	3 Intermediate	2 recurring visual motifs used	
	4 Complex	3+ recurring visual motifs used	
O	Filling the Gaps (i.e., Situating the Reader)	The use of visuals and text to enable the audience to draw from their own experiences, opinions, values, often through customizing the map to their situated context.	
	1 None	No noticeable consideration of filling the gaps	
	2 Simple	At least one, static allusion to considering the reader's situated context	
	3 Intermediate	Between simple and complex filling of the gaps	
	4 Complex	Explicit, typically interactive ways to adjust the map to the reader's situated context	
Main Design Alternatives			
	Story Map Conceptual Design	The underlying major decisions which determine the visual, informational and semantic structure of the Story Map as a whole	
C	Genre		
	1 Static News Maps	Linearity enforced by layout, highlighting and annotation on the map	
	2 Longform Infographics	Linearity enforced through the browser window's scroll functionality	
	3 Dynamic Slideshows	Linearity enforced by clicking or swiping through panels presented individually	
	4 Narrated Animations	Linearity enforced by the narration and advancement of time in the animation	
	5 Personalized Story Maps	Linearity enforced by the user	
	6 Multimedia Visual Experiences	Linearity enforced through the layout and hyperlinking of text, images and graphics	
C	Content Schema		
	1 Inverted Pyramid	Logic structures which dictate how the most important content of the story is logically sequenced	
	2 Pyramid	States the most important piece of information in the headline, then follow that with the next most important in the opening, and then continue adding information of a lesser importance	
	3 Hourglass	Opposite of the Inverted Pyramid	
	4 Martini	Provide a review, next present the arguments and at the end give conclusions so readers are engaged at the beginning and at the end, whilst realizing how pieces fit together	
	5 Slideshow	Presents a single-path author-driven narrative. When completed, it opens up to a reader-driven stage where the user is free to interact with the data.	
	6 Drill-Down	Typical slideshow format incorporating interaction mid-narrative within one slide. Slides often function as in the martini glass structure.	
	7 Unclear/Other	Presents a general theme, allowing the user to choose among particular instances to reveal additional details	
C	Visual Platform		
	1 Consistent	The type of viewport alongside is visuals on which the information contained in the story is navigated and visualized.	
	2 Variable	a single graphic (map or visualization) with no major changes is kept, and the information is successively displayed on it as users navigate	
O	Role of Visualization		
	1 None	Multiple and different graphics, animations, and content are displayed as users navigate.	
	2 Equal	The relative proportion a visualization has with respect to other forms of story material	
	3 Figure	No visualizations	
	4 Prioritized	Visualizations are smaller in size, probably used for reference only	
O	Role of Cartography		
	1 Equal	Visualizations occupy most of the screen space	
	2 Figure	The relative proportion maps have with respect to other forms of story material	
	3 Prioritized	Maps and other content types have comparatively the same size	
		Maps are smaller in size, probably used for reference only	
		Maps occupy most of the screen space	
Navigation Input			
B	Input Type		
		Next/Prev Buttons	The type of input used for advancing the story
		Scrolling	
		Swiping	
		Slider	
B	Navigation Indicators		
		Progress Bar	Graphic (potentially interactive) widgets which indicate the reader's position in the story. Regardless of the type (time, section, area, etc.)

	<i>Timeline</i> <i>Section Buttons</i> <i>Menu Selection</i> <i>Breadcrumbs</i> <i>Geographic Map</i> <i>Checklist/Progress</i> <i>Trackers</i> <i>Visualization</i>	
	Navigation Feedback & Transition Guidance	
C	Level of Control	Determines the way animations are triggered as readers continually produce input
	0 None	No feedback apart from the normal or change in scene
	1 Discrete	the user generates input and the animation plays automatically and for an extended period of time
	2 Continuous	animation advances at the same pace as the user input, or even synchronously through its keyframes
	3 Mixed	Both types of levels of control exist in the interface
B	Animation On	Graphic elements on which the input has an animation effect
	<i>Text</i> <i>Visualization</i> <i>Cartography</i> <i>Widgets</i>	
B	Change of Viewpoint	The behaviour of the viewer "camera" along the XYZ axes
	<i>Angle</i> <i>Distance</i> <i>Position (same distance)</i>	Camera angle changes without changing position Distance to the object or the map changes Position of the camera with respect to the object or map changes
B	Object Motion	The behaviour of the object(s) in the view along the XYZ axes
	<i>Rotation</i> <i>Distance</i> <i>Position (same distance)</i>	The object/map moves in its own XYZ axes The object changes its distance with respect to the camera The object/map changes its position with respect to the camera
B	Editing	Refining techniques which allow readers' keep track of movement, scenes changes or temporal changes in animations
	<i>Object Continuity Editing</i> <i>Spatial Continuity Editing</i> <i>Temporal Continuity Editing</i>	Can a particular object can be tracked/traced? Does the animation follow the 30/180 degree rule or provides establishing shots between transitions? Is it possible to identify where the animation ended (spatially/temporally) when a transition occurs?
	Communication of Narrative and Information	
B	Advancement of the story	Text and graphics which convey information and indicate an order or sequence. Some of them provide additional information to a visualization/map.
	<i>Establishing Shot/Splash Screen</i> <i>Introductory text</i> <i>Visual summary</i> <i>Captions/Headlines</i> <i>Labels</i> <i>Annotations</i> <i>Flowchart arrows</i> <i>Ribbons</i> <i>Small multiples</i> <i>Sequential insets/maps</i> <i>Synthesis/Conclusion</i> <i>Accompanying Article</i> <i>External exploratory Maps/Visualizations</i>	A landing/introductory page containing an overview, titles, subtitles for the topic about to be introduced. Usually contains media or indicates loading content. A brief piece of text introducing the theme of the story Summary of the maps/visualizations/graphics within the narrative Text indicating the content of maps/visualizations/subsections. Text over objects showing some of their attributes Text over/connected to objects containing additional information Directional lines which indicate a reading order (Directional) lines potentially indicating a reading order or route. May have changing symbolologies. A series of graphs or maps with the same scale used for easy comparison A series of maps having different scales, data and extents used for advancing and explaining the story A section or element containing text or visual which tie the end of the narrative back to beginning, giving a summary of everything which has been viewed, a conclusion, or final message. Articles related to the main content but not directly included in the narrative. Usually of optional access Link to a separate exploratory map or visualization to distinctly separate open exploration from the story itself
B	Emphasis (Focus Attention)	Visual techniques for emphasizing features, or groups of features in the map/visualization/text. Could be used either for non-temporal aspects of phenomena or spatio-temporal change
	<i>Typographic emphases</i> <i>Call-outs</i> <i>Dynamic Zooming</i> <i>Zooming/Close-ups</i>	Font is formatted to stand out from the rest and represent meaning, other than importance or hierarchy Dialogue-like bubbles connected to objects Detailing of geographic areas for emphasis with animation in between Detailing of geographic areas for emphasis. No animation in between, usually insets.

<i>Highlighting</i>	Use of distinct symbologies to emphasize object(s). From changing colors to complex visual hierarchies
<i>Annotation</i>	Use of annotations for emphasis in addition to provide additional information
<i>Masking</i>	Changing symbology of surrounding objects/areas in order to prioritize the view of object(s)
<i>Audio</i>	Sound or audio narration refers directly to certain objects
<i>Object motion</i>	Object(s) relative change of its location/size/shape in coordinate space
<i>Dynamic Panning</i>	Recentering the map dynamically to express change
<i>Panning</i>	Recentering the map via scene changes, small multiples or successive insets
<i>Successive built-up animations</i>	The sequencing of a series of data pieces onto each other to emphasize the difference between an initial state to a new one
<i>Viewpoint change</i>	Similar to navigation feedback, but this viewpoint change is intended to emphasize the subsequent changes in the narrative.
<i>Blinking</i>	Use of different techniques for emphasis (usually highlighting) intermittently on an object to attract attention.
<i>Flashing</i>	Use of visual effects to locate/highlight objects. Unlike blinking, this lasts for a short period of time.
<i>Fast forward</i>	Accelerating animation playback
<i>Slow motion</i>	Decelerating animation playback
B Linking	How the maps and interface maintains consistency and connectivity between its features. This linking does not belong to a cartographic operator
<i>Linking through animation</i>	Through animation, the reader can trace the movement of objects from position to position
<i>Linking through color</i>	Use of color to link data between a visualization/map/text
<i>Linking through typography</i>	Use of different font styles to link the data
<i>Linking through symbol</i>	Use of symbols (outside the cartography) for connecting data pieces
<i>Linking through reference</i>	Textual references point to specific features or media within the narrative
<i>Linking through hyperlinks</i>	Hyperlinking text and objects (outside the visualization or map areas) to features within the visualizations or cartography.
Interaction	The degree that the user can manipulate the map.
B Interaction Working Operators	The kind of functionality provided to manipulate the map.
<i>Reexpress</i>	Change the displayed map type
<i>Sequence</i>	Change the currently viewed map from a set of maps
<i>Overlay</i>	Change displayed feature types (overlay) or basemap type (underlay)
<i>Reproject</i>	Change the projection parameters
<i>Resymbolize</i>	Change design parameters without changing the map type (e.g., color scheme, classification, scaling ratio)
<i>Zoom</i>	Change map scale
<i>Pan</i>	Change map centering
<i>Rotate</i>	Change map orientation
<i>Filter</i>	Remove map features from within a feature type based on user-defined conditions
<i>Search</i>	Add or highlight a map feature of interest
<i>Retrieve</i>	Request details about a map feature of interest
<i>Arrange</i>	Change map layout. Manipulate the layout of views in a coordinated visualization
<i>Calculate</i>	Derive new information about a map feature of interest
<i>Brushing/Linking</i>	Connecting and synchronizing linked views and features
B Interaction Enabling Operators	
<i>Import</i>	Load a dataset or previously generated map
<i>Export</i>	Extract a generated map or underlying geographic information for future use
<i>Save</i>	Store the generated map, geographic information, or system status
<i>Edit</i>	Manipulate the underlying geographic information
<i>Annotate</i>	Add graphic markings and textual notes
O Interactivity	
1 <i>None</i>	No digital interaction
2 <i>Low Interaction</i>	1-2 interaction operators implemented (e.g., pan and zoom, search and retrieve, overlay and retrieve) in online map
3 <i>Intermediate Interaction</i>	Between low and high interaction with online map
4 <i>High Interaction</i>	5+ interaction operators implemented (i.e., beyond the slippy map prototype of pan, zoom, overlay, retrieve) in online map
B Other interactive capabilities	
<i>Story threading</i>	The capability of the platform to support participation via comment and observation threads (much like a blog). This may be enabled via social media functionalities.
<i>Narrative text authoring</i>	The possibilities of adding comments and annotations on visualizations for further study and analysis
<i>Snapshots</i>	It is possible to save a visualization state, for further analysis and use
<i>Embedding of cartography or visualizations in websites</i>	Embedded cartography or visualizations can be shared via a hyperlink, and being displayed in other website
B Interactive Cues	How the interface prompts/shows the user how to interact and use maps and visualizations
<i>Explicit Instruction</i>	The use of the interactive interfaces/operators is explicitly shown to the user
<i>Tacit Tutorial</i>	The use of the interactive interfaces/operators is implicitly shown to the user. E.g. animation

<i>Input Requests</i>		
C	Splitting Control	Users are addressed and requested for specific input (through an interface style) Where in the spectrum of author-driven or reader-driven approaches the map is located. These are more descriptive and might be independent of the content schemas
1	Passive storytelling	prohibits the interaction on the consumer's part; the author fully controls all domains
2	Storytelling with interactive approval	passive storytelling pauses at certain points and lets spectators take temporary control. They can change the visualization's view, representation, and even content. Once they're satisfied with this interactive exploration, storytelling continues as originally intended.
3	Semi-interactive storytelling	consumers can take control not just for an interim excursion but for an entire section of the story
4	Total separation from the story	consumers can completely detach from the story and engage in interactive visualization with total freedom.
<i>Information Access Rhetoric</i>		
B	Metonymy	Manipulate part-whole relationships within the data, serve simplification as well Involves creating a subset of a larger dataset to present a simplified visual presentation of chosen features
	Selection of variables	Mathematical or statistical operations which can be used for the description of potentially large numbers of samples
	Aggregating	Classification or grouping of values before other operations/visualization
	Categorizing	Partitioning of numerical datasets into subsets with specific ranges
	Binning	Assignment of a value beyond/below which data behaves differently or can be classified differently
	Thresholding Values	Combination of variables to describe features in the map which can potentially not be related to each other/relevant for the story
B	Omission	Strategies that may be motivated by the desire for simplification or outright disregard
	Ambiguous variable definition	Mentioned or mapped variables are not explained clearly
	Knowledge assumptions	No provision of information necessary for understanding other concepts
	Omitting exceptional cases	Presence of outliers in the information, or "exceptions to the rule" are not considered
	Neglect data sources	Avoiding citation and crediting for data sources or sponsors
<i>Procedural Rhetoric</i>		
B	Anchoring	Direct attention of the user in a way the presented information helps convey a message
	Context	The situational status in which the events or phenomena take place is described
	Geographic context	Information about the geographical space in which events or phenomena takes place
	Search suggestions	prompting the user to examine particular parts of the data rather than explore freely
	Default Views	provide an initial point of interpretation anchored to a default visual configuration
	Fixed comparisons	present some information by default so that users can contrast this information with other values in the visualization.
	Goal suggestions	prompts the user to execute a series of steps that will reach an intended result
	Frame	Map aesthetics and graphics are modified in such a way they visually allude to the involved situation. It can potentially trigger certain emotions on readers
<i>Linguistic</i>		
B	Similarity	Are based on the comparison between entities motivated by similarities between them. The depiction of two or more objects with the purpose of indicating the differences and contrasts between them
	Comparison	resembles analogy and parallelism but the goal tends to be for effect and emphasis of a similarity relationship between objects
	Simile	hinges on a linguistic or visual similarity alone that is used to unite two ideas or entities.
	Double entendre	a comparison is made in order to provide insight into the lesser known of two entities
	Analogy	involves expressing two linguistic statements or visual features to show that they are equal in importance.
	Parallelism	equate two ideas or values by labelling or directly asserting that one is the other
B	Individualization	
	Familiar Setting	Sets a point in the story related to the location or characteristics of the user Subject unexpectedly addresses the viewer. To make a direct connection with viewer; to demonstrate the artificiality of the presentation; to challenge the objectivity of the observation. To make it clear that this is one interpretation. Surprise, so attention-getting.
	Breaking the 4th wall	The reader is addressed, but it is invited to take part, participate for a cause or execute actions related to the topic at hand
	Call to Action	The characters' own narration advances the story
	Voice	Narrative depicts several scenarios on the topic from involved people's own point of view.
	Individual point of view	Labeling features/locations differently according to distinct languages, endonyms or past names
	Multilabelling	The story is advanced with more than one narrator's words.
	Multivoicing	The verbal interaction between multiple narrators advances the story
	Dialogues	The implementation of interaction interfaces and operators, in a similar way videogames do
	Gamification	The individual points of view are furthered by allocating exclusive subsections for their elaboration (within the main page)
	Substories with several scenarios	provokes the audience to ask themselves the question. It can set the context for a subsequent exploration of the reasons behind the answer
	Rhetorical question	Set up a discordance between meanings and an alternative implied meaning
B	Irony	

	<i>Quotation marks</i> <i>Deliberate understatement</i>	phrases or words are enclosed within quotation marks to indicate they may be false, unimportant, contradictory, etc. The wording in a phrase has been modified to belittle the element it refers to, despite it is obviously relevant, or not to be disregarded
Mapping rhetoric (Visual representation)		
B Visual metaphor	<i>Concretization</i> <i>Defamiliarization</i> <i>Physical metaphor (e.g. Multi directional labelling)</i> <i>Convention Breaking</i> <i>Avoid implicit spatial relations</i> <i>Dynamic concepts</i> <i>Flexible Scales and Detailing</i> <i>Symbolic or semantic insets</i>	Techniques that change the way the data/information is visualized i.e. the strategies taken for using alternative forms of visual representation, independent of the numerical aspect itself and rather related to the semantic properties of the data The visual depiction of data is similar to the real object it represents Presenting something familiar in a novel, unexpected way. This challenges expectations, and encourages reading the map in new ways. Defamiliarization can be used to highlight and question implicit assumptions, and to force thinking differently about a well-known fact. Use of the space itself and the relative position of objects for the representation of additional meanings. E.g Up= positive, down = negative Establishing a graphical convention and then break it, causing surprise Position of objects with respect to each other represents additional meanings, and their spatio-temporal change is depicted in unexpected ways. Use of symbols to represent subjective information (e.g. emotion), as well as the same symbol two represent different concepts Varying scales of contiguous areas in a non-conjoined way to vary detail and show only what's relevant on each of them. Offers a more flexible way to vary scale and orientation, introducing spatial distortion Included insets represent subjective meanings, and have other purposes apart from spatiotemporal comparison
B Obscuring		Methods for introducing noise, ambiguity and complexity into a visual representation.
	<i>Gratuitous 3rd dimension</i> <i>Oversizing</i> <i>Indiscernible transformations</i> <i>Avoid salient visual judgement</i> <i>False relationships</i> <i>Complex design tactics</i> <i>Noise</i>	Unneeded 3rd dimension has been added to the map, causing interpretation to be difficult or ambiguous Objects have been overscaled, potentially with purposes of emphasis and disregard of other features New symbolization product of data transformations is difficult to detect, read and interpret Data has been visually represented either with the wrong visual variables, or using symbolization which is difficult to read or interpret A relationship between two or more objects which is potentially artificial has been defined Overly intricate maps and visualization that require longer time to understand, or may even be impossible to read Visual effects, graphics or text which interfere with the reading or interaction with the map
B Redundancy	<i>Repetition</i> <i>Gradual reveal</i> <i>Information Dosing</i>	Approaches which take advantage of the density or importance of the information to distribute it either repetitively or partitioned into pieces through the map interface. Repetition of identical objects, or the disaggregation of values with little variance or similar functions or relationships between them are used for emphasis and reinforcing parts of the story Delays the disclosure and depiction of an important piece of information using graphics, text, animation or audio. Reduces complexity by packaging the content into immediately understandable chunks of information
Provenance rhetoric		
B Data provenance		Strategies that authors can take to increase the reliability of their creations, they can be seen as part of the most important ethical considerations in the visualization domain.
	<i>Citing/linking data sources</i> <i>Methodological choices</i> <i>Additional references</i> <i>Relevant facts</i> <i>Indicating exceptions and corrections</i>	Consists of the inclusion of metadata and additional information which users can use for further investigation, replication and reference. It is also related to the proper crediting sources and facilitators deserve. Authors acknowledge and cite their data sources Specifications about the methods and techniques used for the creation of the map/data processing are included References to further reading or related content not particularly essential to the story is provided Key information related to the data or any other component within the narrative is specified.
B Identification	<i>Author information</i> <i>Personal anecdotes</i>	Further updates, modifications as well as acknowledging the exclusion of information are indicated. Information regarding the authors/creators of the narrative as a whole The author provides contact or personal information The author states comments, opinions or experiences directly.
B Representing Uncertainty	<i>Expressions of doubt</i> <i>Describing inferential limits</i> <i>Forecast specifications</i> <i>Error bars</i> <i>Leap-of-faith</i>	Provision of details on the existent and possible limitations of the reliability of the underlying data which the visualizations and maps are supported on Limited reliability on the results/information/assumptions is clearly shown with expressions which indicate so Descriptions about the limitations of predictions Specification of data which is a prediction, rather than real data Graphic representation of existent inaccuracies in the data Information product of an obviously unreliable forecast/prediction is indicated

APPENDIX D – MAP SAMPLE

	Map Title	Author
Static News Maps (Stationary Story Maps)	Witness Killings Since 2004	Thompson and Lu (2015)
	Tracking D.C.-Area Homicides	Park, Mellnik, Pezon, and Lu (2017)
	A Peek into Netflix Queues	Bloch, Cox, Craven McGinty, and Quealy (2010)
	Tracking Evictions and Rent Stabilization In NYC	Wei, Groeger, Podkul, and Schwencke (2016)
	España en Cifras	populate (2015)
	Wanderlust	Roberts (2008)
	A Tale of Many Cities	Ratti et al. (2014)
	Which Flight Will Get You There Fastest?	King and Silve (2015)
	Election 2015: Where to Vote Tactically to Get the Prime Minister You Want	Nardelli and Gutiérrez (2015)
	Visualizing the Racial Divide	Vallandingham (2011)
Longform Infographics	Mapping the World's 4.3 Billion Internet Addresses	Cameron and Scola (2015)
	Mapping the Frenzy of Europe's Migrant Crisis	Misra and Lucify (2015)
	Miles of Ice Collapsing into The Sea	Gillis et al. (2017)
	35 Years of American Death	Koeze (2015)
	Reshaping New York	Fessenden et al. (2013)
	Travel the Path of The Solar Eclipse	Karklis et al. (2017)
	Five Years of Drought	Nelson (2016)
	How Trump Redrew the Electoral Map, From Sea to Shining Sea	Gamio and Keating (2016)
	A Nation Divided	Zeit Online (2014)
	California's Getting Fracked	Flagg, Craig, and Bruno (2014)
Dynamic Slideshows	The Politics of British Housing	Burn-Murdoch, Pearson, Allen, and Pickard (2014)
	Global View: Climate Change in Perspective	Bruns, Strausfield, Cousins, Sears Nick, and Harding (2014)
	How the Islamic State Is Carving Out A New Country	Sharma, Karklis, and Thorp (2014)
	Arya's Journey	Northwestern University Knightlab (2014)
	Bay Area Ridge Trail: Bay Area Ridge Council	National Geographic Maps (2014)
	Urbanization in East Asia Between 2000 And 2010	Bremer and Ranzijn (2015)
	Islands of Contention: Tiran And Sanafir	Al Jazeera (2017)
	The Climb of Alpe d'Huez	Mason, Griggs, and Ostlere (2015)
	Mobility: Engine of Our Regional Economy	Chicago Metropolitan Agency for Planning (2014)
	World Remittances	Bauer, Boyandin, and Stalder (2013)

Narrated Animations	Operation Sawfish	Stahl et al. (2015)
	Airbnb's Happy New Year	Airbnb (2015)
	Britain's Royal Navy in The First World War	Brohan (2012)
	Visualization of Global Cargo Ships	Kiln and UCL (2015)
	Glasgow In Motion	Urban Big Data Centre and Economic and Social Research Council (2016)
	The Long Journey Of New York City's Garbage	Galka (2016)
	The Globe of Economic Complexity	Cornec and Vuillemot (2015)
	Fans on The Move	Elkanodata and Ticketbis (2015)
	In Flight: See the Planes in The Sky Right Now	Kiln (2014)
Personalized Story Maps	Street View Treks: Petra	Google (2015)
	The Dawn Wall: El Capitan's Most Unwelcoming Route	Andrews, Watkins, and Ward (2015)
	The Wild Path: An Icelandic Adventure	Bebber (2015)
	Katrina	esri (2015)
	Ships in The San Francisco Bay	Kronick (2016)
	Five Days in London	Webadvantage (2017)
	Hubway Challenge 2017	Perkins & Leung (2017)
	The Forced Migration of Enslaved People in The United States 1810 - 1860	Nelson et al. (2016)
	Chasing the Matterhorn	Kohler et al. (2015)
	Solve 50 Problems In 50 Days	Smart (2012)
Multimedia Visual Experiences	2013 Colorado Flood Recovery: Four Years of Progress	Fischer (2017)
	1812: When Napoleon Ventured East	Nedkova et al. (2017)
	The Genesis of Exodus	Presbyterian Church (U.S.A.) Office of General Assembly & World Mission (2017)
	How We Animated Trillions of Tons of Flowing Ice	Watkins (2017)
	How the Paris Shooting and Hostage Standoff Unfolded	Curtin, Juan, and Bentley (2015)
	What Happened at Each Location in The Brussels Attacks	Yourish et al. (2016)
	Spies in the Skies	Aldhous and Seife (2016)
	Mapping the Shadows Of New York City	Quoctrung and White (2016)
	Wealth Divides	Esri (2016b)
	Costing Nature	Medaglia (2015)
